MOO! THE EPIC HORNS

Meuh ! Les grands bovidés

At the dawn of time, their hoof prints mingle with those of Humans. Step after step, century after century, the great bovine family has accompanied humankind. As essential partners on our greatest territorial conquests, they continue to change the world at our side even today.

In the beginning, 18 million years ago, there lived a tiny, shy, forest-dwelling horned mammal. All alone, through the laws of evolution, this small antelope becomes the ancestor of the Aurochs, now extinct, which turned humans from the status of hunter-gatherers to that of breeders. Then the ox, yak, buffalo and zebu followed. These descendants are now pivotal elements in many cultures across the world. And against a background of species disappearing from the Earth, they are becoming the biggest land mammals.

From their wild forms to the multiple domestic breeds they produced, via the selective hand of humans, the bovines have thus gone side by side with our civilizations throughout our History. This series takes us along their trail.

**WORLDWIDE WINE CIVILIZATIONS - SEASON 2****Des vignes et des Hommes - saison 2**

At the whim of history's turbulent moments or extreme geographical conditions, Mankind, with all its vision and epic ambition, takes us off on a crazy adventure where wine mingles with art, archeology, geology, history and architecture. The soil, the vintage and the technique are definitely not the sole expressions of the character of a vineyard. From India to Patagonia, by way of Europe, we also discover these regions from the sky, with landscapes that take the breath away.

The dawn of wine (India)

Vineyards at lands end (Patagonia/Argentina)

Tropical Vineyards (Thailand)

The vineyards of the Himalayas (China)

The vines rising in the east (Croatia)

**WORLDWIDE WINE CIVILIZATIONS - SEASON 1****Des vignes et des Hommes - saison 1**

The fruit of a long history, of a natural environment and of the labors of those for whom it is a passion, each vineyard tells the tale of a unique civilization.

Worldwide Wine Civilizations is an exceptional documentary series devoted to exploring winemaking regions around the globe. In addition to delving into a region's wine production, each episode will also explore local history, its architecture, art, science, techniques, and a host of other subjects.

Worldwide Wine Civilizations will feature breathtaking 4k aerial cinematography of the world's most picturesque winemaking regions. With each episode the spectator will be plunged into the heart of a winemaking civilization in Europe, South America, North America, Asia, and Polynesia. This series will take viewers on a voyage through time and space, seeking out and discovering past and present civilizations, exploring their grandiose natural environments and their complex and multifaceted cultures.

The secret of the three valleys (Chile)

A vineyard to vie with nature (New Zealand)

Vineyard at the desert's door (Australia)

Lavaux, the fortress vines (Switzerland)

The king of vines, the wine of kings (Hungary)

A journey to the origins of the vine (Georgia)

In Europe, the number of smokers has fallen dramatically - unfortunate for the tobacco industry. That's why it is trying to still being allowed to advertise for its products using massive lobbying to convince politicians. While advertisements for tobacco products are prohibited in most of Europe, the industry is still allowed to advertise in Germany. As it wants to polish up its image in order to seduce potential customers with supposedly healthier alternatives to smoking, they are most happy to do so.

But are these products really risk-free? They are aimed primarily at young people: successfully. Shortly before Christmas the Marlboro producer Altria announced to take part with 35% in the e-cigarette company Juul, which efficiently managed to reach young people on social media in the USA to get them started with e-cigarettes.

In the newly-industrialized countries, on the other hand, tobacco companies are continuing as before. Minors are particularly affected. In Indonesia, four-year-olds are already smoking, and in Malawi children work on chemical-infested plantations.

The film reveals how the tobacco industry wants to continue to secure its profits despite the headwind - and who pays the price

Electric cars, wind turbines, solar panels... The energy transition holds the promise of a more prosperous and peaceful world, finally free of oil, pollution and shortages. But this official thesis proves to be a myth : by breaking free of fossil fuels, we are setting ourselves up for a new dependence on rare metals. Severe ecological, economic for the supply of these strategic resources have already begun. And if the “green world” that awaits us turned out to be a new nightmare?

With the Americans becoming the world's largest oil producers, much to the displeasure of their Saudi allies, world order is turned upside down.

Through an incredible poker game played between the producer countries of the black gold, a new world is being drawn, a prelude to the post-oil era.

RESUME

At the end of 2013, the price of a barrel of oil starts to fall; within two years it will lose 70% of its value.

This shock downturn in oil could be just one more manifestation in the story of oil prices, but it reveals an incredible scenario.

By becoming the planet's largest producer of the black gold because of their shale oil, the United States overturned the world order in oil that has prevailed since the Second World War.

In a major strategic change, the Americans are no longer dependent on oil from their Saudi allies, who came under suspicion following the September 11 attacks of 2001. To counter this power grab, Saudi Arabia has engaged in a game of poker. Produce more oil to drive the price of a barrel as low as possible and bring off a triple coup: ruin the American shale oil industry and weaken its worst enemies, Russia and Iran. A highly risky strategy, but this scenario is full of surprising twists. A gripping game of poker between states with winners and losers, all watched by those who speculate and set the market: the traders.

Meanwhile, the oil companies are laying off workers and delaying future exploration for longer and longer.

Is this poker game the herald of the post-oil world?

SHELLFISH, FROM THE SEA TO OUR PLATES

Fruits de mer, de la mer à l'assiette

In France, the annual shellfish consumption is nearly 10 kilos per person. But behind this growing trend, we know relatively little about the origins of these products: how are they caught, raised and packaged, or what's happening between the ocean and our table? We set out to meet the fishermen and fish farmers who are constantly surpassing themselves to meet the growing demand.

KING COFFEE

Le café broit-il du noir ?

Oh that little espresso in the morning... whether at the corner café, at home or with colleagues at the office, who doesn't follow the daily ritual?

On a global scale, coffee is the most consumed drink after water. In value it is the world's biggest agricultural product.

And things are not likely to change, because consumption of coffee is on the rise, driven by new ways of consuming it. Over the last ten years the "regional" trend has become evident with the boom in coffee shops where baristas serve coffee as if it were wine. Behind their glistening neo-retro percolaters they talk of body, power, fruit, bitterness... It looks as if the "quick brew" is becoming "grand cru".

WHAT FUTURE FOR THE OYSTER?

Les huitres, bientôt la fin ?

50, 70, and sometimes as much as 80% of the oysters produced in France never see the customers' plates... and why? The mollusks have experienced an incredible mortality rate over recent years... A mystery ailment is decimating them and damaging an entire profession... It's a veritable massacre that began in 2008, when a new oyster made its appearance: the Triploid.

This is a creation of man... An oyster of the future that grows twice as fast as its natural fellow... However, since its introduction, the mortality rate has hit increasing highs. So, has the Formula 1 version of the oyster a link with this carnage? Is it climate change or the emergence of some new virus? Are we the last generation to taste natural oysters? An investigation into a disaster that nothing seems able to halt...

YOGHURT, AS PURE AS SNOW?

Le yaourt est-il blanc comme neige ?

There was a yoghurt was white and natural. A time when there was only one yoghurt... That time has gone with the arrival of mass consumption and the overriding need for originality. The list is too long to mention them all: bifidus, farm, Greek, Bulgarian, brewed, fruit, soya, organic, flavoured yoghurts, etc. An investigation into the desert business where brands compete to outdo each other in imagination in order to get a bigger slice of the cake.

So what are the hidden elements that go into yogurt? Fermented milk, certainly, but also a lot more. Artificial flavors and colorants, milk powder, starch... all ingredients that are found in most of these little pots... with labels that are often a mystery... Is yogurt really good for health? Are there any differences between brands? We investigate the biggest market in the French food industry.

CAVIAR, THE BLACK GOLD

Caviar, l'or noir

As the world economy collapses on every continent, there remains one sector that is not experiencing any crisis... and surprising as it may seem... we are talking about caviar! The world's leading producers have set up there and are grabbing huge shares of the market thanks to their farm-raised fishes. From their labs where the tiny eggs are assembled to the 5-star hotels of Abu Dhabi, from the kitchens of the greatest Parisian chefs to the highly exclusive caviar-tasting clubs, our cameras shoot, for the first time, the people who have turned caviar into a real business... and also into a way of life. A trip into an astonishing world... where luxury and gastronomy are but one...

**ISHINPO, THE HEALING ARTS****Ishinpo, l'art de guérir**

Through the story of the most ancient text of Japanese medicine, The Ishinpo, and the celebrated Hippocratic Corpus, embodied respectively by the Chinese doctor, Qi Bai, and the Greek, Hippocrates, we embark on a formidable medical and scientific quest conducted by the renowned Oxford academic, Professor Denis Nobel. We reveal the astonishing history of the creation and the preservation of these documents, analyze their content and examine their resonance in the modern world.

An exceptional quest that travels back in time, leading us to the discovery of the origins of medicine and, by using biomedical science, establishing the links between Asian and Western medicines for the first time. And this in an age when people are questioning the relevance of modern medical practices.

**BACK TO THE MOON****Apollo 11, à la conquête de la Lune**

16 July 1969. A rocket, carrying Apollo 11, sits on the launch pad at Cape Canaveral awaiting a historic and insane mission... to walk on the surface of the Moon for the first time... to open a new chapter in human history.

Hour by hour, we relive the crucial moments of those 8 days, 3 hours, 18 minutes and 35 seconds, the incredible echo the mission sent around the world and the growing awareness of a Humankind awakening for the first time to its fragility in the immensity of the cosmos...

An extraordinary journey, a veritable return to the Moon, which, in recent years, has once again become the target of space agencies due to the success of the International Space Station.

From the very beginnings of Man's first missions into space to our days via the preparation of astronaut Thomas Pesquet and his international crew, and the state of scientific knowledge in 2016...

In November 2016, French astronaut, Thomas Pesquet, American Peggy Whitson and Russian Oleg Novitsky will blast off for a six-month stay on the International Space Station. Between now and then, they will undergo intensive psychological, physical and scientific training.

This first film about Soyuz Mission MS-03 will follow our heroes through their long preparation, demonstrating how Thomas Pesquet, as all his predecessors, in particular Russians and Americans, embodies all that has been learned from the space adventure that has been building for more than fifty years. Through the life of this outstanding young astronaut, and the many experts who accompany him on this experience, we revisit the way in which the training of astronauts has progressed with the increasing number of manned flights and how they have gradually adapted to the evolution of knowledge.

To travel this road to the stars in company with Thomas Pesquet, his team and all those who have gone before him, is a wonderful opportunity to assess the state of knowledge gathered over fifty years of space science.

FROM ISS TO MARS- SPACE, THE FUTURE OF THE EARTH**De l'ISS à Mars - l'espace, avenir de la terre ?**

Hurting at 28,000 km/h around the Earth aboard the ISS, Frenchman Thomas Pesquet, American Peggy Whitson and Russian Oleg Novitsky carry out experiments in association with laboratories all around the world on various solutions for preparing extended missions such as the one whose destination is Mars.

And the results are promising... with the adaptation of human physiology to microgravity, waste recycling in order to survive independently, the development of new materials, more efficient means of propulsion and robotics, Science demonstrates that the prospect of a mission to Mars, of life elsewhere for Humankind, is in process of becoming a reality...

Thanks to these missions and the work of scientists around the world, the brakes preventing us from flying for beyond a year at more than 400km from our atmosphere (the altitude of the ISS) will be removed with 20 years. Mars is now in the sights of the space agencies. And the red planet is in the minds of astronauts all over the world...

They are on the ocean surface and in the abyss, in soil and plants, not to mention the intestines of insects and large mammals, including humans. They are bacteria, and they are present in every corner of our planet.

Are we aware that among the billions of bacteria that exist on earth, less than 1% of them are pathogenic?

Recent discoveries reveal that bacteria are not only linked to the very origins of life on earth, but that they have become indispensable to the continuation of life. Researchers today say that bacteria are partly responsible for the process of evolution, a point of view that encourages us to take a closer look at Darwin's theory.

Breathing, eating and digesting. Growing. Keeping protected. Reproducing. In all of these essential functions humans and earth's other organisms live in close symbiosis with bacteria. A Bacterial World will delve into this vast subject and explore a new vision of interdependence with bacteria.

The moon is familiar; she watches over us. The Moon is our only natural satellite. Appearing in our skies some 4.5 billion years ago following a collision between the Earth and a nomad planet, she chose to remain in our orbit. She influences life much more than we imagine and was probably the reason why life first appeared on Earth. She raises the oceans, serves as a biological clock for the reproduction of certain species and is the driving force for animal migrations. As long as 4 billion years ago she caused a 500-meter-high tide of lava. From India to Australia, from the bay of the Mont Saint Michel to Papua, or in the sacred pits of the Mayas in Mexico, we have a date wherever the Moon shows her face.

In Brazil, in Africa, in Southeast Asia and in the south of Europe, this film will follow the path of 4 mosquitoes, each of which is capable of transmitting viruses and dangerous parasites to humans. These mosquitoes are the carriers of dengue fever, malaria, and other infectious diseases. They take advantage of environmental changes, often caused by human activity, as well as a multitude of means of transportation, which help them to spread to new territories and threaten newfound populations. They are highly resistant to the protection strategies continually being developed by researchers. But scientists continue their field research, inventing new arms in the battle, each more surprising than the next.

Facing the serious health risks they present us, humans have engaged in a fierce battle against the mosquitoes on the rise.

THE PLACEBO EFFECT**L'effet placebo**

The placebo effect has long enjoyed a notorious reputation. To attribute a cure to the placebo effect, was to consider, with a touch of contempt, that the illness was the product of the mental state of a hypochondriac. If he invented his illness, he could invent this cure. Now, in contradiction to these theories, scientific studies carried out over recent decades show that the placebo effect can result in physiological changes that are both observable and quantifiable. By means of a rigorous investigation this film aims to shed fresh light on a powerful phenomenon that is associated with every medical act, in order to lift the veil on part of its mystery and begin to explore our formidable power for self-healing.

SOS VESSEL IN DISTRESS!**SOS équipage en détresse !**

SOS is the ultimate cry for help of a crew in distress... Royal ships, supposedly unsinkable vessels, abandoned crews, ecological disasters, unexplained disappearances, abysses and remains require additional decoding...

Using the latest technologies, and with the assistance of the finest archaeologists, historians and naval engineers, this documentary series retraces, minute by minute, the exact circumstances of these disasters.

The chain of events leading to the wreck is decoded at a breathtaking pace. Time is relentless and suspense awaits at every turn.

UNDERWATER MYSTERIES

U-171: German u-boat torpedoed off the Brittany coast (Groix, France) during the Second World War.

The Vendémiaire: French submarine at the beginning of the 20th century. The sinking is related to a maneuvering error in Brest harbor (France).

AFFAIRS OF STATE

Bugaed Breizh: French trawler that mysteriously sank off the Lizard Rock (international waters, southern UK) in 2004.

The Afrique: a ship that sailed from Bordeaux overloaded with supplies for the colonies. It sank off the Ile de Ré (France) in 1920.

ABANDONED AT SEA

The Raft of the Medusa: French ship sent to supply the colonies in Senegal. It left the port of Rochefort and was wrecked on the Arguin bank in Senegal. Géricault will turn the shipwreck into a famous painting (Louvre).

Costa Concordia: the accidental wrecking of the Costa Concordia, an Italian cruise liner, in 2012 near the island of Giglio, off the coast of Tuscany (Italy).

LEGENDARY SHIPWRECKS

Titanic: British ship that sank on her maiden voyage in 1912 off the coasts of Newfoundland (USA).

The Pourquoi Pas: French boat built in Saint Malo having belonged to Captain Charcot. It sank during its second expedition to Antarctica.

UNDERWATER GRAVEYARDS

The Joola: Senegalese ferry working between Dakar and the Casamance. Overloaded, it sank during service in 2002 (over 2,000 victims).

The Niobe in 1940: a French ore freighter sunk by the Germans in 1940 (nearly 1,000 victims).

SECRETS OF THE KING

Lune: Louis XIV's supply ship that capsized off Toulon (France). Nearly 800 perished at sea.

Vasa: Swedish ship that sank on its maiden voyage just one mile off the coast. Today there is a museum in Stockholm dedicated to the ship.

DISASTERS IN TROUBLE WATERS

The Erika: On 12 December 1999, the Erika, chartered by the Total oil company, breaks up south of Penmarc'h. The giant 550' tanker is carrying 37,000 tonnes of heavy crude.

Amoco Cadiz: American oil tanker that ran aground on the Brittany coast (France) during a voyage from the Persian Gulf to Europe in 1978.

CAUGHT IN THE STORM

Lamoricière: Steamship of the Compagnie Générale Transatlantique (aka: the French Line), entering service in February 1921 on the North African routes out of Marseille. It is wrecked in 1942 off the coast of the Balearic Islands after being caught in a storm.

There are 301 dead and 93 survivors.

The Semillante : On February 15 1855, an imperial frigate of the first line, La Semillante, is lost with all hands on an islet in the Lavezzi archipelago to the south of Corsica with nearly 700 souls on board. Not a single passenger survives on that fateful day, which remains forever etched in the Corsican collective memory.

MARITIME MYSTERIES, CASE CLOSED**Mystères maritimes, affaires classées**

Major maritime disasters of the century, vessels that disappear mysteriously, suspicious fires... so many cases of naval and maritime enigmas that were considered closed. And yet, recent underwater archaeological discoveries, in combination with the emergence of new archives, are re-opening the investigations and bringing some dark secrets of the abyss back to the surface. And this collection takes us down the trail of these maritime mysteries. In the light of these discoveries, history is gradually being rewritten. Each film follows the trail of some new, exciting inquiry... to finally reveal the secrets and the mysteries! From the waters of the Mediterranean to the Pacific Ocean, from the depths of the Atlantic to the seabed of the Caribbean memories of human drama resurface in this passionate inquiry by our investigators of the sea.

AND THERE WAS MUSIC

Et la musique fut

Music is everywhere: in bars, churches, shops, ritual ceremonies, in the headphones of our smartphones, in both public places and private places ...

It adopts an infinite number of different forms, as varied as the forms of the living world. Everything around us happens as if music had proliferated over time, transforming itself through a series of mutations.

How to explain this universality and diversity? Would it be possible to go back to a source? To an origin? Let's try to jump back in time, to the sources of music.

To answer these questions, we will go in search of archaeological traces, trying to reconstruct what the music of our ancestors could have been. We will start with the oldest known instrument: a bone flute whose age is now estimated at more than 40,000 years old! We will then explore other traces of music in prehistory: archaeological remains that we interpret today as instruments, engravings and paintings, and all that we can deduce from the Cro-Magnon's relationship to music.

Through the story of this journey, through image and sound, this film will seek to show how music, ultimately, is inseparable from our humanity.

EASTER ISLAND: THE TRUTH REVEALED

L'île de Pâques, l'heure des vérités

This is a tiny island, lost in the middle of the Pacific Ocean. But it stirs up passions: the Easter Island.

Because it owns one of the most precious treasures of humanity: the famous stone statues called moai. Who was this Rapa Nui people who created such a masterpiece? Where did these men and women come from? How did they disappear?

From Easter Island to the Marquesas Islands, from Brussels to Los Angeles, three world-renowned archaeologists have investigated for more than twenty years. And what they discovered tells a whole different story ...

ALBI'S MAPPA MUNDI – THE WORLD OF YESTERDAY**La Mappa Mundi d'Albi, le monde d'hier**

In an ancient town in the southwest of France lies a “treasure”: Albi's Mappa Mundi. Dating from the 8th century and included in a manuscript, this map is the oldest known representation of the world as a whole. How was it made? Why is its shape so particular? What exactly does it describe? What was its purpose? To answer these questions, historians, paleographers and scientists conduct a minute investigation and, step by step, the Mappa Mundi reveals its secrets.

IN THE EYES OF THE PHARAOHS**Dans les yeux des Pharaons**

For archaeologists, the word “eden” is what best describes Egypt. The Egyptian sands are an ongoing source of new scientific discoveries such as the seventh wonder of the world, the mythical Lighthouse of Alexandria, destroyed by an earthquake in the fourteenth century. Today, visualizing this unique work of art is a difficult challenge. In Thebes, a team of archaeologists sheds light on the famous Ramesses II, the greatest of pharaohs, and his Ramesseum, also called the “palace of a million years”. We will discover the world's first ever library! Comprising 22 rooms spread underground over three levels, the tomb of lector priest Pediamenopet is an incredible place. The walls are entirely covered with ancient funerary hieroglyphic inscriptions.

THE SUN KING'S SECRET SHIPWRECK**L'épave cachée du Roi Soleil**

Louis XIV's ship La Lune was wrecked off Toulon in November 1664. The ship was returning from an expedition to the Barbary Coast with nearly one thousand people on board, simple seamen or nobles of the highest rank. In an instant all was lost, men and their belongings, the cargo and the ship. Under pressure from the Sun King and his entourage, who planned to conceal the disaster, La Lune was quickly forgotten. Discovered by an Ifremer submarine in 1993, the wreck lies in 90 metres of water. In a state of magnificent preservation, like some underwater Pompei, she will, starting in 2012, be the subject of an exceptional archeological investigation, bringing together history and robotics, the expertise of archeologists and the passion for the deep. Michel L'Hour, whose renown in the domain of underwater archeology needs no introduction, invites us on an exceptional dive. He goes down, as if in a live broadcast, to the wreck of La Lune / The Moon, the flagship of Louis XIV. A wreck that he considers to be unique in the world...

LAFAYETTE IN THE AMERICAS

Lafayette en Amérique

At the very beginnings of the birth of the United States of America is a legendary battle in which French and Americans fought together against the English: the battle of Yorktown. In this 90 minutes docu-fiction, we will relive events as if we were there during the nine days of the confrontation. And we will discover the political and strategic motivations of an unprecedented transatlantic alliance, which would lay the foundations for a new world order that finds itself today in a period of questioning and turmoil.

LOUIS BLERIOT, THE IMPOSSIBLE CROSSING

Louis Blériot, l'impossible traversée

Combining human adventure and historic achievement, "Blériot, the impossible crossing" traces the history of this incredible challenge: the first flight across the English Channel in 1909. 110 years later, a team of Blériot XI enthusiasts will try the crazy gamble to fly their fully authentic reproduction of the aircraft across the channel, propelled, for the first time, by its original engine. This adventure will highlight the real significance of the event that marked the beginnings of world aviation.

THE ULTIMATE BATTLE

L'ultime combat

In 1986, South Africa organized an illicit rugby tour against the All Blacks. What they didn't expect is that it would precipitate the fall of the apartheid regime.

In this documentary, we will relive each day the anguish of this unknown rugby tour. But above all, through interviews with many international rugby personalities (Andy Dalton, Chester Williams, Johnny Wilkinson, François Pienaar, Bernard Lapasset, Serge Blanco ...), we will discover how this sport, via its federations, has often had ambiguous associations with apartheid, from a tolerance linked to financial interests to a real desire to change things, especially following the Cavaliers' tour. Eventually becoming a powerful diplomatic weapon in the hands of Nelson Mandela, determined to reconcile an entire nation through the use of this discipline that was once a symbol of white supremacy.

THE REAL STORY OF THE RAFT OF THE MEDUSA

La véritable histoire du Radeau de la Méduse

The Machine... that was the name given to the raft of the Medusa by those whose sorry task was to build and launch it at the height of the storm. 148 sailors and one woman, willingly or not, were heaped aboard this makeshift craft. 7 were to survive. Many people know Géricault's magnificent and frightening painting. But who knows the real story that lies behind this world-famous painting? Using a double investigation - one contemporary carried out by a passionate historian and one from the past carried out by Géricault for the creation of his work - The Machine invites the viewer on a voyage to rediscover piece by piece this astonishing page in our colonial and maritime history. The Raft of the Medusa is not only a painting. On the eve of its 200th anniversary, it's time to shed the full light upon it...

Marie remembers... As a young Caledonian woman of twenty, her life is turned upside down when American troops arrive in New Caledonia on March 12 1942. Nothing will ever be the same again. She falls in love with Arthur, a young US Air Force pilot. They live out their idyllic love against a background of war, a major, bloody war: the War in the Pacific. Recruited as a nurse into the Red Cross, she spends the war on a base behind the lines that receives the wounded from the front. She also lives through the changes on the Caledonian archipelago, where the clash of cultures between the tiny French colony at the far end of the world and the American way of life of the 40s is experienced as a leap into the future. Marie tells this story, her story...

Golden Voice tells the story of Jean-François Marras, a young Corsican man who became a tenor at the Paris Opera at the age of twenty-six when nothing in his life predisposed him to his artistic career. On the contrary. This film reveals the events that transformed his life and forged his destiny. We voyage back with him to his roots in Corsica, land of his origins, then off to New York where he perfects his technique and prepares his future. The film is an initiatory journey that explores family, traditions, talent, and the grace of having a great gift and then struggling to reveal it. At that moment, no limits exist. This golden voice is on track to conquer America.

And what if the current migration crisis were in fact a crisis of our individual humanity?

Over the last six years, the journalist Isabelle Serro has travelled throughout Europe, meeting the women and men working individually and spontaneously to help those who have taken the routes to exile. Very often, it is in the shadows and hidden from the spotlight, that these people undertake the essential tasks to make the migrants' everyday lives easier or to preserve the future for these exiles in search of a refuge. They offer lodging, they heal, they nourish, they comfort. In this period, where citizen initiatives to help exiles in danger is very likely to be judged as a crime of solidarity, where welcoming someone is not the norm, where fear of the foreigner is stronger than the thirst for discovery, the journalist – film maker shines a light on these hidden actors who have become the resistance fighters of a new era, the guarantors of humanity for tomorrow.

FIRST STEPS AT THE OPERA

Premiers pas à l'Opéra

They are singers, musicians, choreographers and directors. They are between twenty and thirty years old. They have been chosen for their excellence and start their residency at the Academy of the Paris Opera. Culture and music are their trump cards and their strength. They embody both diversity and living together, but also a new generation of committed artists. They talk Mozart, Puccini, Verdi... via Skype and their cell phones. They are the world and the talents of tomorrow.

Along with them, throughout an entire season, we discover the mysterious world of the Opera and make it accessible to all. We keep pace with their apprenticeship, their art, their doubts and hopes until they take their first steps on the stages of the Bastille or the Garnier Opera houses.

This film is their story.

FOUR SEASONS WITH DIOR

Quatre saisons chez Dior

2017 is a historic year for Christian Dior. Known for its uniquely French haute couture heritage, the famous fashion house is celebrating its 70th anniversary. One of the year's highlights is the appointment of Maria Grazia Chiuri, former artistic director of Valentino, as Dior's first-ever female creative director in its history. She is presenting her debut couture collection in Paris. Along with this eagerly awaited event in the fashion world, this exceptional year will breed many other exciting events, including the brand's magnificent setting in Tokyo. We will spend a year behind the scenes of this great fashion house, experiencing these events alongside seamstresses, apprentices, milliners... All those who contribute to make Dior a temple of excellence.

PLANET FIFA**La Planète FIFA**

Since its last congress on May 28 last, FIFA has emerged as a totally corrupt organization. Rigged elections, World Cup competitions bought, bribes, arrests... the news of recent months has brought world football's leading body to the ground.

Sepp Blatter, FIFA president for over 17 years was even forced to resign. Unprecedented in the history of football.

At a moment when the organization is rocked almost every day by a host of intrigues and scandals, this documentary reveals how a small, non-profit association founded in 1904 was able to transform itself over the years into a sprawling financial empire.

From Paris, to Washington, Rio de Janeiro, Yaoundé, Zurich and London, the investigation reveals the hidden face of the institution of world football: a corrupt multinational, which over the years has turned over billions of dollars.

FIGHTING IS FROM THE SEA

En mer contre Daesh

On November 18, 2015, five days after the attacks in Paris, the President of the Republic ordered the carrier Charles de Gaulle to sail with her 2000-strong crew.

The French nuclear carrier does not set out alone to the coasts of Syria: a veritable fleet sails with her to ensure her protection. Warships specializing in anti-aircraft combat, a submarine detector ship as well as a fuel supply vessel... no less than a half a dozen ships make up the escort. And that's not all: further ahead, concealed in the deep, a nuclear attack submarine is leading the way.

Exceptionally, the military authorities allowed us to film the daily lives of the crews of the nation's navy over a period of several months. We will discover how the war against terrorism is being waged from the sea.

On March 11 2011, three of the four reactors at the Fukushima Dai-ichi nuclear power plant exploded. A nuclear disaster that has « officially » caused the death of two people so far ; two workers at the nuclear plant who died after cases of devastating leukemia. But four years after the disaster, the truth surfaces little by little... The first patients, mostly children, have developed thyroid cysts. Hundreds of thousands of people would have been infected... And its consequences are not only dramatic for Japan. Radioactive particles have crossed borders, transported by air and water. On the west coast of the United States, some fish caught in the Pacific also bear traces of contamination. In Europe, concern focuses on products imported from Japan. In France and Switzerland, numerous tests are frequently conducted to ensure that radioactive food does not enter the market. Who are these sick children? What is the real extent of the contamination - for humans and the environment? Why does the Japanese government refuse transparency? Who are these citizens, journalists, or doctors from Japan, the US and Europe who are fighting for the truth to be known? An investigation into a nuclear scandal...

BODY LANGUAGE

Ce corps qui parle

Our body talks. Mastering body language gives a strategic edge to a wide range of professionals, from corporate executives, doctors, lawyers, to masters of martial arts, scientists, executives in insurance, financial institutions and law enforcement, customs officers and spies.

The newest findings of neuroscience, psychology, and technology are changing the way we look at the connection between mind and body, and how we interact with each other. Our "nonverbal language" is now under scrutiny in all walks of life.

Body Language exposes the power of nonverbal behaviour in areas we never thought of before. By the end of this journey, the viewer has discovered that the human body, moulded by hundreds of thousands of years of evolution, is still the most amazingly expressive medium in existence. And that new techniques for deciphering body language have wide ranging impacts on our personal lives and on issues as vital as world security.

THE RETURN OF THE CAMELIDS

Le retour des camélidés

From China to South America, in passing through the Sahara, caravan routes have been taken over by mechanized transport. Now camelids, camels, dromedaries and llamas, must be re-converted, to continue bringing life to the most arid regions of the world. They must support the millions of people who live there, and thus avoid a fatal exodus towards the outskirts of megacities. Going beyond the outdated image that often accompanies them, we visit 14 countries to explore these camelids - with or without humps ; to meet the men and women, farmers, entrepreneurs and researchers, who innovate and mobilize to create new industries, and thus allow the camelid family, symbol of adaption, resistance and economy, to play a major role in the modern world. The camelid revolution is advancing!

1 - The Princes with 2 humps

Le Prince à deux bosses

They're camels, they have 2 humps, and they can resist just about anything: arid deserts, extreme cold, extreme heat, salt water. For 1,500 years, they enjoyed their heyday on the Silk Road, from the orient to the occident. Some have even remained wild, even in the cruelest desert of the world.

Scientists study their mysterious humps. Along with camel milk, they are the foundation of a new dairy industry. Their very fine hair competes with cashmere and wool, but they are also the guardians of the great nomadic tradition of the steppes.

Travel along the Silk Road, Mongolia, China, Kazakhstan... as well as in Canada to discover these Princes with Two Humps!

2 - The Superdromedaries of the desert

Les superdromadaires du désert

Dromedaries have a hump. For 4,000 years they allowed nomadic tribes to live in a very hostile environment. They are the ships of the desert. Saddle animals, pack animals, the dromedary provides man with its meat, milk, skin ... Today, with the disappearance of caravans, and the settling of peoples, they integrate into the modern world! The production of their milk has become intensive, and cheese is even made from it! The dromedary competes with the horse, with thoroughbreds racing on camel racetracks. It is the object of a high-tech reproduction, but its' almost mythical rapport with man remains.

Travel to Tunisia, Saudi Arabia, the Arab Emirates, India... and Switzerland, to discover the Superdromedaries of the Desert.

***Silver Trophy in the category "Sustainable Agriculture & forestry"
of Deauville Green Awards 2017***

3 - The Gods of the Andes

Les dieux des Andes

Historically, small camelids, humpless camels, have always served as valuable aids to the Andean populations. The llama and its domestic and wild cousins, the alpaca, vicuna and guanaco, provide wool and meat, and transport caravans on the Incan trails.

Mechanization, urbanization, and hunting have provoked their decline. Today, they are reclaiming their space, more and more.

Thanks to the fiber of their fur, the alpacas and vicunas are conquering the world, and help communities to live. The alpacas have come back to the land of their ancestors! Wild guanacos, once more under protection, have become the « lords of the land » again. And for the Andeans, llamas, are still sacred and irreplaceable. Travel the Americas, Peru, Chile, Canada... and France to discover the Gods of the Andes!

WESTERN DOWN UNDER

Western aux antipodes

It's one of the most dangerous jobs that exist. In northern Australia, at the commands of helicopters, planes, buggies and bikes, men and women put their lives on the line to gather up herds. They maneuver in river beds and around trees, pursuing wild bulls who have never seen humans... They call it "mustering". It's dangerous, spectacular - and a crash or a fatal goring is always a risk. At the heart of the Australian bush, almost 200 miles from the nearest town, we follow life at Warrawagine Station during this intense period. Three generations of the Mills family and their young employees reign over a property the size of a small State. During five months, their daily lives are filled with danger, adrenaline, isolation and sometimes apprehension. From gathering animals, to transporting them in enormous trucks, they are forced to cross rivers, working the paddock, live in the camp while others wait worried at the ranch, and travelling endlessly to gather supplies... Everything here is an adventure...

IN THE LAND OF THE TURTLES

L'île aux tortues

Bora Bora is the pearl of the Pacific... the most beautiful of lagoons... the most beautiful white sand beaches... the most beautiful hotels in French Polynesia. However, behind the picture postcard images lurks the biggest traffic in turtle meat in the South Pacific. Teva agreed to take us aboard his potimararaa fast, powerful boat that can handle any sea and shake off any pursuer. Teva is a fisherman on Bora, but when fish are rare, he won't hesitate to poach turtles. Every week some 80 to 100 turtles are killed in Polynesia to end up on the plates of rich Tahitian worthies. A veritable organised network as André Frémont, deputy procurator, has realised: "I used to believe that it was an occasional hunt during festival periods. But last week we discovered 700 kilos on Bora. It's not one turtle now and then: it's a huge and very lucrative hunt." Michel Arakino eats turtle meat but doesn't deal in it. Owner of an atoll in the east of the Tuamotus, he's an impressive man tattooed to his fingertips. Honu the turtle is "in his genes, his flesh... it's not an animal for tourists, it is closely linked to the Polynesian nation, to the customs and uses of this people." For Michel "all the regulations imposed by Paris are hot air. customs and uses of this people."

WHEN SHARKS ATTACK

Quand les requins attaquent

Are those giant predators of the oceans and heroes of horror films man-eating sharks back off our coastlines? Maybe they are... Because Jaws has struck again in South Africa: a surfer was eaten by a Great White on "Second Beach", one of the most dangerous beaches in the world. Sharks are attacking ever more frequently... and creating more and more victims... and it's the Great White that heads the list of the most dangerous species in the world: 404 attacks... ahead of the Tiger Shark: 157... and the Bull Shark: 121. In fact, it was the latter that was responsible for the death of Mathieu Schiller on Reunion in October. The findings of researchers are worrying because the number of attacks has more than doubled in thirty years. The finger of suspicion is pointing at human activity... and in particular at shark feeding, a tourist attraction that is often indispensable to the local economy.

Every year, Rob Torelli, famed spear fisherman from Melbourne, Australia, prepares for the opening of the abalone fishing season. In October the pressure mounts. He has to confront an obstacle of considerable size: the great white shark. Sabine is getting ready to join him, to share this unique and perilous moment. A few months later and a mere few cables lengths away, a fascinating spectacle is played out in secret below the water. Dozens, then hundreds and finally thousands of crabs gather together to assure their mutation. Sabine takes up a new challenge: make the rendezvous for this magical and exceptional event...

THE UNSILENT WORLD**Vacarme en haute mer**

If you listen to "the world of silence" with the super-powered ear of a marine mammal, you are immediately drowned in growling, groaning, wailing and whistling. In this world where vision is limited to twenty metres, everything is communicated by sound... a world that is one hundred times louder than a tropical forest. So imagine two dolphins in conversation: "Pikuit to Stuito"... "Pikuit to Stuito"... "Let's go and fish at the same rock as yesterday!" "Stuito to Pikuit!"... "I'll go ahead and I'll send you the radar image!" It sounds like science fiction! And yet it's totally real... As you will discover from the many experiments conducted "in the field" for "The Unsilent World" in Hawaii, Honduras and Florida by the foremost experts on whales and dolphins! It also explains how whales can converse at a distance of 4,000 kilometres... and much, much more! But beware! Danger! From the snowstorms of the Arctic Ocean to the naval base of La Spezia in Italy, we discover that the most sinister of pollutions is under way. Invisible, unknown to the general public, it is about to render mute this world. The 50,000 props of cargo ships that permanently criss-cross the planet, the underwater seismic searches for oil that bombard the oceans' floors with explosions twice as loud as a jet fighter taking off and, even worse, the low-frequency sonar used by NATO in the hunt of submarines, of which a single blast can "empty" a zone of 100,000 km2 of its inhabitants... are but the initial examples of the noises that these "sonar" animals are subjected to everyday. If this inferno of noise continues, then... no longer able to communicate or guide themselves, marine mammals will be forever condemned to wander where chance takes them in the permanent fog of the oceans! An inevitable decline!

IN THE EYE OF THE CROCODILE**Dans les yeux des crocodiles**

In Madagascar, the tiny village of Ambalavuntaka lives in fear of killer crocodiles. For eight years, one or more creatures have been circling this tiny peninsula, isolated in the middle of the Pangalanes canal in the East of the country and each day they bring terror. In the last few years, five people have been eaten. As the canal is the only source of water, it's impossible to lead a normal life... washing up, bathing or simply crossing the canal - all these simple, everyday acts have become a bold and risky adventure. They have stopped counting the number of cattle and poultry that have disappeared, victims of these fearsome predators. Too poor to buy a gun, the villagers are unable to defend themselves. But even if they did have a rifle, they would still be helpless against these monsters that have to be approached by water and hit in the eye to be sure to kill them. It's a skill that only a few accomplished hunters possess. Responding to the call of such a terrible curse on this tiny village lost in the distant bush, a renowned young Madagascan hunter and a French crocodile expert join forces to try to rid this village of the plight the curse has brought upon it.

WHEN THE MERMAIDS ARE SINGING**Le dernier chant des sirènes**

Inoffensive and difficult to observe, dugongs are mysterious creatures. Although often described as unsightly, a number of myths and legends are attached to them, earning them the name of Sirenian. Little known to humans, the mermaid of the sea is now an endangered species. However, contact with fishermen and Torres Straits Islanders has helped us to understand their ancestral practices and the reasons why they continue ritual hunting. With some gripping contributions from scientists, this documentary is a beautiful story that turns the myth into reality.

A big vegetable garden at the foot of the Eiffel tower, a nature zone where once there were train tracks, a primary forest and a savannah in Vincennes and in Boulogne's woods architecture and plants blend perfectly. Paris reveals its surprising green areas.

This path of discovery is full of surprises.

Who would have thought it possible to grow lettuce on rooftops in Paris's chic neighborhoods? Yet this is one of the harvests from the garden of a prestige hotel next to the Eiffel Tower.

This garden is highly domesticated, unlike the wild environment created on the former train line circling Paris with its wild fig trees and small wildlife.

This biodiversity is a treasure. Natural environments have also been developed to the East, in the Vincennes Woods, for example this primary forest born after a great storm hit. And there is this wild savannah, which was been planted by the Vincenne Zoological Park's landscape design staff.

Our adventure comes to an end in the Boulogne Woods, in the Jardin d'acclimatation. Here wildlife marries perfectly with the new Foundation Louis Vuitton, designed by the architect Franck Gehry. The blend of plant life with the museum's glass facades is spectacular.

VANUATU, LABORATORY OF CLIMATE CHANGE**Vanuatu, laboratoire des changements climatiques**

Winds of over 300 kmh. On March 13 2015, Cyclone Pam ripped through Vanuatu with devastating power. This distant archipelago in the South Pacific is in the minds of the entire world. However, for Science, Vanuatu is the focal point of our concerns. Earthquakes, volcanic eruptions, coastal erosion, global warming, this Eden made of coral and ash is a veritable laboratory of environmental upheaval and natural disaster. At the heart of the storm are four men: a journalist from Vanuatu, a volcanologist, an explorer and a humanitarian worker trying to understand, raise awareness and rebuild this paradise that, more than anywhere else, is the victim of the forces of nature.

Antarctica. The glaciers and the mystery of this far-away and unknown land have always given cause to dream. And yet, Antarctica is not hospitable to people. Antarctica is beyond human norm. Its winds are super powerful, its temperatures the lowest in the world, its glaciers are fearsome. With my film crew I sailed aboard the Admiral Viel, a Chilean Navy icebreaker, for an exceptional voyage to the white continent. We had the good fortune and the dazzling experience of encountering the wild life, of sharing the lives of the sailors and scientists living in the most total isolation, surrounded by Nature at its most sublime. To see and to understand the exciting work these men and women accomplish every day in the protection of nature is to receive a simple, yet wonderful lesson in humanity.

Along the narrow strip between the Andean Cordillera and the Pacific Ocean, Chilean Patagonia is one of the last virgin territories on the planet. A territory of extremes, composed of vast spaces, volcanoes, fjords, wind and rain. Its official title is "The Austral Road", but Chileans also call it "Route Seven", the Chilean "National 7". This road, which was built in the 70s, crosses Chilean Patagonia from North to South and covers nearly 1,000km. A source of progress for the inhabitants, this road has, paradoxically, weakened the regions it runs through and renders the future of Patagonian Chile uncertain. The proliferation of fish farming, the projects to construct a series of hydroelectric dams and climate change bring the looming threat of unpredictable consequences. A visit to the heart of one of the last virgin territories on the planet where the power of nature contrasts with the fragility of the ecology.

MASTERS OF BEES

Les maîtres des abeilles

The relationship between man and bees dates back to the age of basic gathering, which is still practiced in certain remote valleys of the world. Our story unfolds over five continents, with nighttime gathering, moving of the hives to mountain pastures and in science laboratories where numerous experiments are being conducted on the black bee. It's a story of love, sometimes dangerous, between bees and humans. The latter are the gatherers, the keepers, poets, historians, ethnologists or biologists. Along with the bee they are the heroes of each film. They all help us to discover the many splendors of a fragile world, teach us to preserve nature's capacity for renewal and to respect the cultural practices of human beings.

ON THE WING - SEASON 2

Les avions du bout du monde

Our heroes are physicians, emergency doctors, farmers and, above all, pilots. They carry on their professions in one of these territories at the ends of the earth. We discover these regions that are so difficult to access, that only the airplane can reveal, through the daily work of those whose are living an adventure, in close proximity to nature.

UPCOMING DESTINATIONS 2020:

Flight over the glaciers (Alaska)

Flying madmen from the Amazon (Colombia)

The cowgirl of the air (Wyoming-USA)

The pilot of the atolls (Polynesia)

MARK PALM, THE SAMARITAN IN THE SKY (PAPUA/NEW GUINEA)

Mark Palm, le samaritain des airs (Papouasie/Nouvelle-Guinée)

For 9 years, Mark Palm has been helping residents of the Sepik River villages, one of the most remote areas of Papua New Guinea, free of charge. Snake bites, crocodile attacks, malaria crisis's, difficult childbirths, the life of this 44-year-old Californian is a succession of adventures. Onboard his seaplane plane, he transports the wounded, brings medicine, and organizes vaccination campaigns for the 200 000 Papuans who live along the river, often in difficult conditions.

THE FLYING MAASAI (KENYA)

Le Massai volant (Kenya)

At the helm of his small single-engine aircraft, Ian Lemaian, a Kenyan biologist and bush pilot, flies over the savannah to protect the rhinos. From reserve to reserve, the Maasai pilot introduces us to a series of unique wildlife preservation programs. Seen from the sky, Kenya's open spaces appear now as they were once known to those who once came here on safari.

THE BUSH PILOT (AUSTRALIA)

Le pilote du Bush (Australie)

Clark Butson founded an airline in the heart of Australia's arid desert. Its goal: to unite the isolated communities of the province of Pilbara, in the west of the country. Here, the airplane is the only link with the rest of the world. And Clark has a lot to do to on his missions. Rescues, student transportation, supplies, rotations between mines, visiting aboriginal communities. Clark also helps farmers during "mustering," a massive operation to gather their thousands of cattle scattered over hundreds of kilometers in the bush.

ON THE WING - SAISON 1

Les avions du bout du monde

Our heroes are physicians, emergency doctors, farmers and, above all, pilots. They carry on their professions in one of these territories at the ends of the earth. We discover these regions that are so difficult to access, that only the airplane can reveal, through the daily work of those whose are living an adventure, in close proximity to nature.

TAXI IN THE AIR (MADAGASCAR)

Le taxi-brousse des airs (Madagascar)

François-Xavier Mayer, known as "Fifou", never tires of flying over the fantastic landscapes of his native land, Madagascar. Like his father and grandfather before him, he uses his plane as his main means of transportation.

In this island as big as France, it sometimes takes several days to travel from one city to another by car. Yet, Fifou is super active and moves about all the time. Whether supplying his hotel, studying the migration of whales, or carrying humanitarian aid, he counts on his faithful flying companion, a yellow bush plane that everyone in Madagascar knows by the name: "India Papa". A "taxi in the air" which provides many services, and can even, sometimes, save lives.

THE OMNIBUS OF THE AIR (QUEBEC)

L'omnibus des airs (Québec)

On the wing will again surprise you. After Bolivia, Vanuatu and New Zealand, we set out to meet Sebastien, a former airline pilot. This time we head for Canada and its vast expanses. Aboard his Jet Stream 32 and a seaplane, he introduces us to the magnificent, deserted and isolated landscapes of Northern Quebec. Fasten your seatbelts for imminent take-off!

THE FLYING FARMER OF THE PACIFIC (NEW ZEALAND)

Le fermier volant du Pacifique (Nouvelle Zélande)

Deep in the New Zealand Alps, Guy and Fiona Redfern are the flying farmers at the end of the world. Plane and helicopter are essential in raising the 5,000 sheep, 2,000 cows and dozens of horses on this farm, the most isolated in the country. In addition to being a tool for their work, their plane is also a means of escaping their isolation to meet friends and perform some aerial stunts.

THE PILOT OF HOPE (BOLIVIA)

Le pilote de l'espoir (Bolivie)

Ivo Daniel Velasquez is an anonymous hero. At the controls of his plane - sometimes a tiny Cessna, sometimes a twin-engine Piper - he defies the quite extraordinary flying conditions of Bolivia to come to the assistance of the most remote communities in the country.

Whenever, Ivo lands his plane on the most unlikely airstrips, from the Andes and the Altiplano to Amazonia, for these communities he represents a vital link with the rest of the world.

DOCTOR MARK TO THE RESCUE (VANUATU)

SOS Docteur Mark ! (Vanutau)

Lying to the north of the Vanuatu archipelago in the South Pacific, the Banks Islands are literally cut off from the world. Whenever there's a medical emergency, the 9,000 inhabitants of the Banks have only Doctor Mark Turbull and his orange cuckoo to rely on. The sole doctor for hundreds of miles around, he is the only one who can land on the unlikely and dangerous airstrips of these tiny volcanic islands. Some days, despite changeable weather conditions, he may visit four or five different islands to look at teeth, deliver mothers or even operate on people under general anesthetic on the bare ground of the tropical forest.

WORK BOATS & WONDER SHIPS

Entre cargos et bateaux de luxe

Treat yourself to an unforgettable voyage in the four corners of the globe, come wind or waves, plowing the heavenly-blue seas.

As a highly privileged passenger, climb aboard some unique vessels, as mysterious as they are majestic, and ready to reveal their secrets. Stride the bridge of the QE2, that mythical cruise ship, and then that of the incredible Maltese Falcon, the sailboat with the futuristic lines. Discover your reserved cabin aboard the most luxurious yachts on the planet and wallow in the limitless luxury of these jewels of modernity. Plunge back into history and rub shoulders with kings deep in the Savarona, a floating gem transformed over the years by successive owners.

Share the daily lives of some exceptional crews and meet the men who brave the icy, sublime waters of Canada. Join them on their awesome mission aboard the Waban Aki, a Canadian Coast Guard Hovercraft responsible for clearing ice from the St Lawrence River. Or step aboard the Abeille Bourbon and shiver side-by-side with its crewmembers as they confront the fickle moods of the Brittan

coast. Or yet again, on the Blue Marlin in Korea as it transports its gigantic oil platforms. High excitement, glistening powerful treasures, these giants of the seas along with their crews invite you to discover the most mysterious surface of the globe. One thing is sure: your feet won't touch the ground...

TONGA, A KINGDOM AT THE CROSSROADS**Tonga, un royaume à la croisée des chemins**

Lost in the middle of the Pacific Ocean, midway between New Caledonia and French Polynesia, a string of islands stretches out over nearly 500 km: Tonga. Kings and queens have succeeded one another ever since antiquity in this country that has overcome many a challenge: avoiding colonization, preserving its language and its traditions and introducing a constitutional monarchy as early as the 19th century. We discover a remarkable people, with a younger generation, living in the age of the Internet, torn between respect for its customs and the desire for elsewhere.

THE LOVERS OF THE LAGOON**Les amoureux du lagon**

For all those who love the tropical seas, the New Caledonia lagoon is Nirvana. For the largest lagoon on the planet is also the most beautiful. A UNESCO world heritage listed site, the Caledonian lagoon owes its dazzling health to an extremely low pressure of human presence. That's because the vast territory of Caledonia (the main island is 400 km long) has only 250,000 inhabitants. As a result the lagoon offers huge, totally virgin spaces. A veritable inland sea, the blue Caledonian jewel case contains a host of habitats and ecosystems: islets, sand bars, sunken reefs, mangroves, etc.... oases of marine life that teem with species and provide a fabulous larder for the inhabitants of the archipelago. Aided by magnificent aerial and sub-marine images, the film presents the portrait of six "Lovers of the Lagoon": an adventurer in his den in the north of the island, a biologist specializing in the universe of coral, a woman doctor, defender of the Melanesian culture, a kite-surfer from Numea and a young nature warden from Lifou, in the Loyalty Islands. They have all been enchanted by the stunning beauty of the lagoon. They have all made it their daily lives and their finest reason for living.

HEART OF THE ISLANDS**Coeur d'îles**

Journey to the heart of the Pacific Ocean, as the collection "Heart of the Islands" immerses you in the discovery of these unique islands of French Polynesia. Come and meet the people, the key figures of these unusual islands, still unknown to tourism and strong in their traditions. Committed to the preservation of their heritage, their culture, but also their ecosystem, the islanders you will share the singularity of their identity and their history amidst breathtaking scenery. Whether in the Marquesas, Tuamotu, Gambier, Austral, or Society Islands, all the archipelagos of French Polynesia welcome you for a unique adventure in 10 stops.

UNDERGROUND WONDERS OF FRANCE

Les merveilles de la France souterraine

There's another world just a few meters under the ground: a world of rocks carved by time and the humidity of the deep. France is one of the world's leading countries in underground tourism. The land that bred Jules Verne and his "Journey to the Center of the Earth" possesses hundreds of caves, caverns and other sinkholes, all open to the public. Miracles of nature, whose renown goes far beyond the borders of France.

This film is an introduction to the owners of these treasures "six feet under" and it shows how they manage these unusual businesses.

Using original technical means, we delve into the bowels of the earth to follow the work of those devotees who work day after day in these strange and staggering worlds.

THE SUMMIT OF ULTIMATE CHALLENGE

Le sommet de tous les extrêmes

The massif of Mont-Blanc, the roof of Europe: a fascinating terrain, but raw, where every action performed by those who are drawn there is a brush with the limit. Whether they are crystal hunters, wingsuiters, scientists or glaciologists, exercising their activities demands the highest vigilance, the control of every movement.

These extraordinary and fascinating characters guide us over the changing features of this untamed mineral world where the wildest of challenges are faced every day.

HANGED**Cordistes, la vie au bout d'un fil**

Every morning in France, millions of people settle into a comfortable office routine, meanwhile there are others who climb hundreds of meters off the ground for a living. They are artisans, builders and window cleaners. Ten thousand workers suspended in the air like acrobats. They are called "rope access technicians" and their life "hangs by a thread". A rope that is only a few inches in circumference allows them to climb the highest buildings and still connects them to life on the ground. In the void, danger is omnipresent; any careless mistake can be fatal. Join us as we climb up to meet these workers of the extreme.

FACES OF THE COAST**Visages du littoral**

Filmed from the sky, "Faces of the Coast" is an original journey that transports us to the coasts of France. It follows an incredibly diverse route, where we reveal some hidden corners never filmed before. The strength of this collection is the subtle interplay between flying above people and maintaining a bond with them. The flow of the images, the delicate light on the sumptuous settings where we all dream of being one day, together with singular encounters, lend an incredible charm to this France... generous and appealing.

IN THE SKIES OF POLYNESIA**Dans le ciel de Polynésie**

In another life they were fighter pilots, mechanics with Boeing or military instructors. Today they have realized their dream: to set up in Polynesia and fly over one of the most beautiful regions in the world. Stéphane and Vincent are aces of the air... they teach stunt flying to visiting tourists and the inhabitants of the islands. And when they are not playing daredevils with their students, they put their skills to the service of another clientele... the one that lives on the tiny private islands... islands at the end of the world, accessible only by plane. For these isolated populations, a plane service is essential... but the landing strips on these islands look more like pocket-handkerchiefs... you need skill and the ability to retain a cool head. O'Neil has plenty of both. He is one of the team of Air Archipel pilots who can land anywhere on Polynesian territory. His mission is to save lives by carrying out "évasans" [évacuations aériennes sanitaires] or emergency air rescue operations.

POLYNESIA BETWEEN HEAVEN AND EARTH**Polynésie entre Ciel et Terre**

These landscapes which are in turn magical, unusual and majestic each recount in their own way "the Pacific dream". This diversity of forms and landscapes goes hand in hand with that of the people and communities who populate them and who have fashioned them since time immemorial. From archipelago to archipelago and from island to island, this is also a place where ethnic and cultural particularities, traditions and unique situations are waiting to be discovered.

THE SECRET OF THE PINK PEARLS**Les secrets de la perle rose**

A jewel of nature - more expensive than diamonds! Unknown to the general public, the pink pearl of the Caribbean is the rarest pearl in the world. Negotiated at astronomic prices (up to 400,000 dollars for a single pearl), conch pearls sometimes make the fishermen who find them very rich...and the very rich clients who buy them - very happy. But today the quench conch is a victim of over-fishing and the pink pearls of the Caribbean also risk to disappear... unless, a biologist in Fort Pierce, Florida wins an impossible bet: to graft conches, and like oyster pearls - make from the pink pearl, a simple cultured pearl.

USA THE DEEP SOUTH**USA plein sud**

From the State of Georgia to the Gulf of Mexico, across Alabama and then down the Mississippi to its mouth, "USA, the Deep South" is a journey of encounter with those who love the Deep South. Elgin Wells combines his two passions: music and stunt flying. Pilot, musician, poet, he is one of the few in America to present nighttime aerial displays. At Natchez, on the banks of the Mississippi, Pat Martin and Gay Guercio open the doors to Stanton Hall and Longwood, two magnificent mansions in the heart of the old cotton plantations. On Avery Island, the descendants of Edmund McIlhenny produce Tabasco, a simple recipe based on Mexican spices that has remained unchanged for 150 years. In the Atchafalaya Basin, an extraordinary nature reserve that is a paradise for birds, crawfish and alligators, And to finish, as Hurricane Isaac approaches, a most unlikely encounter with Chris and Steve, crab fishermen in the swamps on the shores of the Gulf of Mexico.

The Yucatan. A tiny corner of the world bathed by the oceans. A land of crystal clear waters and dense jungle linked by hitherto unexplored subterranean networks. The cradle of the Mayan civilization and the point of impact of the Chicxulub meteorite, which is said to be the cause of the disappearance of the dinosaurs. To explore this land so steeped in history and discover its secrets: one man. The body of an athlete. An intense, hybrid character, with powers of adaptation beyond the norm: Guillaume Nery. Five times world champion for constant weight free diving. Astride the frontier of environments, half-man, half-fish, moving with equal delight over land or under the sea, he is constantly pushing the boundaries of his physical capacity to further his desire for exploration and, in the water, his quest for a unique form of beauty. It is in this surreal environment that Guillaume will attempt a rare performance with the promise of previously unseen images: a free dive into the heart of a legendary cenote.

MAPS OF THE GREAT EXPLORERS**Les cartes des grands explorateurs**

In this age of Google Earth our aim with this documentary "Maps of the Great Explorers" is to retell the exciting story of the representation of the world. The objects of fantasy and fear, but also of conquest and power, the "new worlds" have haunted men's imaginations. The representation of the world has developed. To represent the new limits of a region, a country, a continent, or a sea was to control and sometimes even to possess it exclusively. The representation of the world, therefore, became one of the stakes for power and influence. The Republic of Venice, Portugal and Spain were at the forefront of these conquests. Such advances were impossible without instrumentation, the means of transport and position-finding techniques. However, the essential link was provided by men with mythic destinies. From Christopher Columbus to James Cook, they set out in search of these unknown lands and their exceptional resources. Out of a sense of mission, pure vocation, these famous discoverers tirelessly travelled the globe, its seas and its territories in the quest for knowledge, fame and fortune.

EXPLORERS**Les explorateurs**

The "Explorers" series shows how Europe plotted the maps of America and the Pacific between the 15th and 18th centuries. From these three prolific centuries of exploration, five illustrious characters stand out, standard bearers of some of the greatest voyages in the history of humanity. Five explorers for five films, each lasting 13 minutes:

- **Amerigo Vespucci** from Genoa, who gave his name to the "New World".
- **Magellan** from Portugal, who, in the fury of the high seas, discovered the passage around this new continent and unlocked the door to a new ocean.
- **Bougainville** from France, who made France's first round-the-world trip in the footsteps of Magellan.
- **La Pérouse**, who needs no introduction, was sent by King Louis XVI in response to the English domination of the seas.
- **James Cook** from England, the most illustrious navigator-explorer of all time, who accomplished three trips to the Pacific in search of the Austral continent!

ER VETS

Urgence Vétô

Discover funny, poignant, touching stories... stories about human beings, stories about animals. To entertain and move are the objectives of this series of 5 x 26' programmes that follows veterinarians, animals and their owners in the field, where stories, packed with life and passion, are born and played out. An immersion into the everyday lives of vets through reports that reveal those life and death moments as they unfold in clinics and vets' offices, those unavoidable crossroads where veterinarians, animals and owners all come together.

ER VETS: WELCOME TO THE CLINIC

Urgence Vétô : bienvenu à la clinique

Doctor Bertrand is worried: his patient is suffocating. He calls his colleague, the duty surgeon, Doctor Brasseur. Interns and nurses stand ready. This is an emergency. Bao, a two year-old Golden Retriever, has swallowed a golf ball. In the next room, Godzilla, Mrs Fontaine's iguana, is refusing to eat. Welcome to the veterinarian ER in Manages near Brussels. 6 doctors, 3 specialized veterinary assistants, several interns. Operating and examination rooms, a test laboratory, an X-ray room and a medical imagery system, human presence 24/7... You laugh, you cry, what you don't do is get bored!

ER VETS: HOME VISIT

Urgence Vétô : visite à domicile

- Chief? There's a call for you... It's Mme Lemarrec... She wants to know if you can drop in? One of her 80 rats is sick. And two others are breaking out in sores. - Tell her I'll call back. I can't now... I'm busy with M. Lavigne. His iguana hasn't eaten for two weeks... So M. Lavigne is depressed! Did you like Vet ER episode 1? Did you laugh or cry as you followed the adventures of Antoine, the young intern with the 12-man team at the Brasseur Clinic? Were you enthralled as you followed the surgeons on call 24/24 to treat and save animals? Were you amazed as you discovered one astonishing animal after another? Then you will love episode 2. Because they are back! And this time, even though the animals are still the stars, their owners reveal a little more of themselves. Passionate, funny, crazy, chatterboxes... By turns moving and unexpected, the owners put on their show before the eyes of the sometimes flabbergasted vets. And during all this time, the animals just sit around!

MESSAGE, AGE OLD TRADITION, WORLDWIDE PHENOMENON**Massage, Tradition millénaire... Mode planétaire**

Age-old tradition, worldwide fashion, massages are a bubble of wellbeing where one can seclude oneself, where time no longer seems quite as important. They represent an ever growing need that is symptomatic of the whirlwind of our society. Global economic crisis, new technologies that are more and more intrusive in our daily lives, stress generated by pervading pessimism, contribute to push millions of people towards massage. From all the continents, they come to northern Thailand to receive training from blind people, the new stars of this discipline, sought-after for their unique touch due to their blindness. In Paris, in the area of La Défense, the opposite extreme of the "zenitude", the new tendency is for companies to "offer" their employees massages, investment at a lower cost for a guaranteed competitiveness. In Montreal, Canada, children are given lessons at school on how to massage each other and parents learn how to practice infant massaging... the discovery of wellbeing in the cradle! Some practitioners use the "Tapping solution" or the EFT invented in the US and now practiced on all continents to efficiently release trauma and relieve many symptoms. Massage, a fascinating tradition and yet incredibly modern, becomes available all over the world.

In 15 years it has become the must-have accessory. There's not a woman's store, or a showcase in a ready-to-wear designer's where you cannot see a... handbag. Why spend 1,000, 1,500 or 2,000 Euros on a bag? Some women are prepared for anything in order to obtain the object of their fantasies. And some designers are achieving incredible success with their line of handbags... like Jérôme Dreyfuss... the star of the genre... His bags are extremely expensive, but they sell like hot cakes. Conversely, in New York, the world's handbag capital, young designers struggle to exist alongside the major luxury brands. The handbag is now creating a second revolution among men, attracting more and more devotees, but there's no question of a loss of virility... Handbags: a look into the world of fashion half-way between irrational passion and ultra-profitable business.

BENEATH THE LINGERIE**Les dessous de la lingerie**

100, 400, 500, 1000 dollars for a complete outfit and sometimes a lot more... women the world over no longer hesitate at spending a small fortune on bras and panties. Lingerie is one of the rare sectors that is not suffering from the crisis. They're innovating with new textiles, shapes are changing and trends are increasingly naughty. What is even more surprising is that one can now tell the condition and behaviour of a society by taking a closer look at its market in panties and suspender belts. In the Emirates, women make up for their austere outer clothing... by wearing ultra-daring underwear. In France they insist on the highest quality of lace and other materials. In the United States practicality takes precedence over aesthetics and in Russia lingerie is the ultimate trump card in seduction. How did lingerie become the mirror of a society and does it reveal the evolution of women on different continents? An investigation beneath the lingerie...

Massage with chocolate or spices, anti-stress cure, balneotherapy, grape seed modeling... the well-being and Spa market is booming. For the millions who now frequent these establishments, whether in France, or Bali or New York, the quest is the same: take care of yourself, give yourself a magical break, a few moments of happiness. Considered an extravagance only a few years ago, the Spa is now an obvious choice. To make a go of it you have to invest, innovate and know how to make that difference. Hotels get a makeover, new qualifications are created and the result is that clients, of all ages, fight to get in. With growth of 30% per annum, designer Spas may soon attract as many devotees in our stressful, bustling cities as the Roman baths did in Antiquity.

ICELAND FROM THE SKY

Couleurs d'Islande

In autumn, Iceland changes its colours: after weeks of permanent quasi-daylight the vegetation bursts out everywhere. Carpeted with moss and lichens, the lava flow on the flanks of the capricious volcanoes turns to fluorescent green. The same applies to the white of the glaciers and the deep blue of the fjords in the northwest. Seen from the sky, the panorama is breath-taking... and not only over the volcanic lands of the Landmannalaugar in the centre of the island with its seemingly unreal colours. Even though Iceland is a world apart, it is not apart from the world: for six months during the 18th century, the eruption of the Laki volcano brought about such changes in the skies of Europe that it prompted the fall of the King of France. From north to south, from east to west, at every stage of our journey we travel an island peopled by whale fishermen, courageous coastguards, atypical ecological activists and Russian tourists who think they are James Bond. Set in the middle of the North Atlantic, Iceland is more than an island, it's a geological anomaly. For those who prefer nature to be raw and beautiful, the island is a formidable playground where the magma broods beneath the glaciers, where the land is gaining over the ocean or where hot water springs heat buildings, baths and swimming pools...

USA FROM THE SKY: EAST, WEST, SOUTH AND NORTHWEST COASTS

Les Etats-Unis vus du ciel : côtes est, ouest, sud et nord-ouest

Filmed in HD, the "Coasts of the United States from the Sky" is a panoramic journey along a coastline that it is both one of the wildest in the world and one of the most sought after. To approach America from the sky, along its coasts, is a new way of discovering the extreme variety of marine landscapes of the United States. 20,000 kilometers of beaches, steep coastlines or swamps, from desert areas to the most urbanized of spaces. Few countries in the world can boast of such shores: the cliffs and sequoia forests of North California answer the long beaches of Florida, the Bayous and swamps of Louisiana contrast with the wild coasts of Maine. And the cities? Here we find the most amazing megalopolises of the planet: Los Angeles and New York. And there are many others too, such as San Francisco, New Orleans, not to mention Miami, San Diego, Seattle and Boston, strung along the American coastline. Great cities that buzz, seduce, revitalize. And the myths? Among the not-to-be-missed locations in the culture and history of the United States are, of course, Key West, right at the tip of the United States, the highly esteemed islands of Nantucket or Martha's Vineyard on the East Coast and, more popular, the seaside resort of Daytona and its world-famous motor racing circuit. And what can you say about Malibu, Venice or Manhattan Beaches, the most famous in Los Angeles, California?

THE FRENCH COAST FROM THE SKY - 11x13'

Les côtes françaises vues du ciel

Immediate boarding for a breath-taking spectacle on the frontier between the immensity of the seas and oceans and the continent.

France: the world's number one tourist destination. The rich medley of her landscapes enhanced by a centuries-old heritage, her coastline draped in the gold of her beaches, the sheer drop of her cliffs and her carpet of forests are evidence enough. Her shores are studded with casinos, luxurious hotels and sumptuous villas, sprouting from the sands in the Roaring Twenties. Her land of legends is bejewelled with mediaeval fortresses, ancestral castles and stunning architecture.

The people of the French coasts, half-human, half-marine, hungry for wide horizons. Convoys of trawlers converging on the ports of dry land. Navigators and explorers whose names are forever engraved in the great History of France.

Our destinations: The North Sea and the Channel / Normandy / Normandy,Cotentin/ Northern Brittany / Brittany, the Iroise Sea / Southern Brittany / The Atlantic, Côte des Lumières [Coast of Lights] / The Atlantic, Côte d'Argent [Silver Coast] / The Mediterranean, Golfe du Lion [Lion Gulf] / The Mediterranean, Côte d'Azur / The Mediterranean, Corsica.

THE FRENCH COAST FROM THE SKY - 26x9'

Les côtes françaises vues du ciel

To tour France by following her coastline -and in the air, too- is the guarantee of a wonderful voyage in three dimensions and between three worlds: the sea, the countryside and the city. Naturally, we fly above the 3,427 kilometres of coast. However, each film will have the same structure to satisfy the spirit of a "collection". 26 city ports have been selected as staging posts along the journey. So, in addition to the sea and the countryside we will have cities. All these are ingredients that will add pace to the editing and diversity to our encounters. We set out on the discovery of a France not only rich in the forms of her coastline, but also in her territories bordering the sea and her city ports, often the focal points of a History that has marked the surrounding areas.

Destinations:

Aber Wrac'h, Dunkerque, Dieppe, Honfleur, Saint Vaast la Hougue, Granville, Saint Malo, Saint Brieuc, Brest, Concarneau, La Trinité sur Mer, Le Croisic, Les sables d'Olonne, Rochefort, Bordeaux, Bayonne, Vendres, Sète, Marseille, Toulon, Porquerolles, Saint-Tropez, Nice, Monaco, Calvi, Ajaccio.

THE YIN & THE YANG OF TAIWAN**Le Yin et le Yang de Taiwan**

Taiwan lies between the China Sea and the Pacific to the east of the Strait of Formosa. A secret island, with many, paradoxical facets. From Taipei, its capital and largest city in Taiwan, we fly towards the Strait of Formosa. 180 kilometres of sea and wind separate the People's Republic of China from the island of Taiwan. In the middle of the Strait lies an archipelago: the Penghu Islands, more commonly known in Europe as the Pescadores Islands, a reminder that these islands were conquered by the armed vessels of the Spanish and Portuguese. For ages, these islands have been the stakes in violent territorial disputes. Pacified, the Pescadores are opening up to the world. Within this new context, the Pescadores are not without some trump cards: in this part of Asia, coasts as wild as these, are a rarity. Over there, on the main island, Taipei, the sprawling city, and the huge huge buzzing ports along the coasts. Here, the Pescadores, the desert islands. Obviously, from the air, the contrast is striking: it's the Yin and the Yang of Taiwan.

Travel to the heart of the South Pacific to discover French Polynesia, which spreads its 118 islands over a maritime territory of 4.5 million km - the surface area of Europe. Seen from the sky in sweeping movements and through images of exceptional beauty, you can admire the incredible diversity of shapes, patterns and shades of the lagoons, atolls, forests and mountains. After a first stopover in magical Polynesia, we invite you to discover a bird's eye view of La Réunion, New Caledonia and the Antilles. this new series tells us the story not only of seas and lands but also of people in their environment. A rich and unexpected discovery, a voyage of exploration to exceptional landscapes as seen from the sky by the birds.

All over the world's seas, crews work and live on incredible floating units. Work boats, ocean liners, all sorts of crafts and yachts often have very special architecture, operation procedures, characteristics and roles... "Exceptional Boats" allows you to climb aboard these different ships and experience unique trips and surprising cruises by exploring them from top to bottom. Through the portrait of a captain, a crew member, an architect or a simple passenger, discover these ships which each tell us the story of a different maritime heritage, a different history of the sea and its relationship with Man.

THALASSA

FAUT PAS REVER

Pacific Ocean, Caribbean, French coastline, Polar Ocean or African coast, "Around the Sea" is a discovery of the world through the sea. Enjoy the trip as we sail and learn everything about the aquatic life of our Blue Planet, through the eyes of the inhabitants, who live and work around these unusual places. A paradise for some and ecological suffering for others...

THE TREASURE OF THE CONCH

Le Trésor du Lambi

In the warm waters of the Caribbean, a superb shellfish is carving out a singular destiny for itself. Harvested since the dawn of time for its delicious flesh, the conch is now exciting the envy of others. For within the folds of its elastic flesh, the mollusk sometime conceals a pearl that can turn the heads of connoisseurs: fishermen, great jewelers and extremely wealthy clients. Exclusively a product of the wild, the conch pearl can fetch exorbitant sums, up to 200,000 dollars apiece! A price justified by its extreme rarity. On average only one conch in 10,000 produces a pearl and only one in 100,000 conceals a pearl of "gem" quality that will go to embellish some stunning piece of jewelry. Of a flaming pink color, unique in nature, conch pearls were long the preserve of crowned heads before falling into oblivion. Rediscovered in the 90s by an American adventuress, the pink pearls are to cultured pearls what a blue diamond is to an average diamond: a miracle of nature! From Japan to Honduras, from France to the Dominican Republic, "The Treasure of the Conch" delves into a highly confidential world and paints the original portrait of an infinitely desirable gem...

BLUE PARADISE

Paradis bleu

Polynesia is one of the most beautiful diving destinations in the world. Nearly 800 underwater species live together in this part of the Pacific.

It's a wealth that attracts lovers of lagoons and the deep blue from all over the world, ready to break the bank to enjoy a dip in this blue paradise!

Diving with dolphins, underwater fishing and also aqua-safaris and meetings with marine film makers... Our enthusiasts tell their stories.

ESTONIA, THE MYSTERY OF A SHIPWRECK

Les mystères de l'Estonia

Accident or crime? The worst maritime catastrophe since the Second World War occurred fourteen years ago, and even today the nature of this drama is shrouded in mystery. Hurried instructions, hushed up responsibilities, arbitrary refusals to recover neither the bodies nor the wreckage by the Swedish authorities and troubling revelations have all opened the door on all sorts of crazy hypotheses. The result: a new official enquiry which reaffirms the accident theory, a theory which no one believes, least of all the families of the victims who cannot forget that the wreckage took place in the most troubling period after the Cold War... This documentary is an enquiry which will untie the knots of rumour, track down the truth, and investigate why nobody has, until now, been found responsible for the deaths of 852 people.

THE SILVER DRAGON

Rendez-vous avec le dragon

This is one of nature's most unusual features: an inland wave far from the sea or the ocean. A wave that comes up the river against the current. A wave that the inhabitants of Qiantang have both feared and admired for 2,000 years. The Silver Dragon – or Chinese tidal bore – is not a wave that is easily tamed or understood. The phenomenon arises from the meeting of the incoming tide and the river's outgoing current. The wave invades the estuary and comes up the river, filling it with a swirling wave. It has long brought destruction. With terrible power, the wave breaks dams and spreads turbid salt water into the fields. Famines have been frequent. The very votive population has begged its forgiveness, offered sacrifices, or shot arrows in its direction. Adopting transient aesthetic shapes, the tidal bore curls, tacks, accelerates, rolls, and defies all predictions. It thunders like a storm, jumps out when least expected, and draws the admiration of scientists. Today, dams and gigantic walls attempt to contain its undiminished power, and a festival honouring the spirits of the sea illustrates the renewed peace with the phenomenon.

FRANCE

THE HUTS OF BIRD ISLAND

L'île aux oiseaux

The 'Île des oiseaux', Bird Island, is a tiny patch of earth in the middle of the Arcachon basin, accessible only at high tide. A world where land and sea intermingle, a natural, fragile territory with some fifty huts set in its centre that have been occupied by generations of the same families during the summer or for a weekend. In this closed world, snug from the external gaze, they live a life of Robinson Crusoe, without water or electricity, with the sensation of existing outside time. However, these huts, for the most part handed down by the ancestors of the present occupants, are affected by the law covering the seashore. Today the historic occupants are no longer owners, but subject to a permit of temporary occupation. The lease runs out in a few months and the occupants may have to hand over the keys to their little corner of paradise. A wrench. So they decided to act. For 8 months we set up our camera in the centre of this community, right at the heart of the life of the island and the occupants' struggle.

THE ICE-MAD ON THE SAINT-LAWRENCE

Les Givrés du Saint-Laurent

The St Lawrence River is one of the most dangerous maritime routes to navigate on the planet. During the winter months, the Canadian Coast Guard icebreaker plows endlessly up and down between the Atlantic and Montreal to clear a passage for cargo ships. For three months we followed the daily lives of the crews of the Amundsen, one of Canada's biggest icebreakers. The task of its crew is to free cargo ships trapped in the ice. However, the St Lawrence is not just a vital artery for the economy of Quebec, it also provides a formidable, open freedom for those who live along its banks. So our crew ventured onto the ice field together with some of those who are wild about the river. Rémi and his friends are experts at white fishing, an ancestral Amerindian technique consisting of tracking the fish under the ice. Every winter they set up a large, temporary village on the ice in the Saguenay fjord. Joannie steers between the drifting floes with the help of her ice canoe. Each adventure onto the river is an opportunity for her and her friends to measure themselves against the elements. We present a veritable epic ice adventure. A winter in Quebec with the ice-mad fans of the St Lawrence.

FRANCE

LIFE ON THE SEINE

Ma vie en Seine

Who really knows the Seine? This river is full of surprises. From Paris to the coast, enthusiasts lead an astonishing life on the Seine. Between the Eiffel Tower and Notre Dame, the river's most famous character is an electrician named Vincent. Sailing his little yellow speedboat across the city throughout the year, he repairs all riverboats and floating restaurants, or even assists boaters experiencing power failures. The Seine is a restless river, which only runs more smoothly as one travels away from Paris. Near Mantès-la-Jolie, Gilles and his family have been living for twenty years on a wild island called the Lorionne, 300 meters long, 30 meters wide. Leading a life of castaways on the island, they managed to connect electricity, find water and restore an abandoned house. The Seine also has its own star: the only female cargo captain in France. Catherine has spent 13 years sailing the seas of the world, but now her life takes her back and forth between the port of Rouen and Caudebec-en-Caux, where she sails cargos of up to 200 meters long.

FRENCH POLYNESIA

MY ATOLL IN POLYNESIA

Mon atoll en Polynésie

In French Polynesia, in the heart of the Pacific, far from the mountains of Tahiti, lies an archipelago that barely rises above the ocean: these are the Tuamotu islands, the land of atolls. Amongst these islands, the Arutua atoll is an exceptional place where land space seems of secondary importance. Circular in form, 29km across, the atoll is composed of 57 groups of islets surrounding an immense and extraordinary lagoon with waters so rich and so pure that fish and pearl oysters thrive there: a huge bounty for the 800 inhabitants of Arutua, pioneers in the farming and production of some of the most beautiful pearls in the world.

MADAGASCAR

THE MONSTER OF THE PANGALANES

Le monstre de Pangalanès

In a tiny village along the banks of the Pangalanese Canal, life is peaceful. The men put food on the table thanks to the wealth of fish in this fresh water haven. The women busy themselves with household tasks and laundering at the edge of the canal and the children like to relax after school by jumping off the tiny mooring pontoon that serves as their diving board. An idyllic life in an earthly paradise. However, today is a day of mourning for this family living at the entrance to the village in a hut of woven bamboo. One of their sons has been taken by the "monster", as they call it here. It's a crocodile. This is the fifty-seventh attack this year and it's far from being the last because here, every year, more than one hundred and twenty people are carried off by the "voay" (crocodile in Madagascan). But this time, Veloma, the village wise man, has decided to take things in hand and confront the animal force with force.

30'
NIGERIA

MAKOKO: THE BLACK VENICE

Makoko, la Venise noire

With its wooden houses on piles, channels with hundreds of pirogues reaching each part of the village and going from house to house, and tree-trunks by the thousand floating nearby, Makoko is an incredible village on piles. 60,000 people are thought to live in this suburb of Lagos. Fishermen mostly, coming from Ganvié (another pile-dwelling village, in Benin) or from the inland villages of Nigeria. The inhabitants work on Lagos harbour, run little shops, sell water and gas, or work for the wood traders. From the sky, it looks like a huge village crossed by hundreds of channels. Houses are sometimes isolated, sometimes reached by wooden foot bridges. The ones belonging to big families, or those lucky enough to have an income, are on two floors. All are made of wood and covered with bamboo, standing on piles driven deep into the mud of the lagoon. You can only get around the village by boat.

SIERRA LEONE

SIERRA LEONE: PARADISE IN HELL

Sierra Leone, un paradis en enfer

Bocuse and Cosmos are not from Lakka. They came here in the 1980s to earn a living in the tourist industry. They worked at Club Med, among others. The Club closed in 1992 because of the war. Lakka fell prey to rebels. There was no more trade. The two men fished to survive. At the end of the war, Bocuse and Cosmos decided to make the most of the knowledge they had built up at Club Med and set up a straw-hut bar on the beach. It was a roaring success thanks to the presence of 17,000 Blue Berets based in Freetown, about 20 km away. They became influential people in the village and even financed the campaign of the future mayor of Lakka. Today they also sponsor the local football team.

FRENCH POLYNESIA

SHARK PARADISE

Le paradis des requins

In French Polynesia, Moorea, sister island to Tahiti, is paradise for lemon sharks. Experienced diver, Nicolas Buray, knows them well from several years of observation. The stocks of pelagic sharks and rays in the oceans are under threat. Ever since April 28 2006, French Polynesia, the size of Europe, has been the world's most vast expanse of shark protection. Fishing for sharks and all forms of their commercialisation are now banned. Nicolas Buray takes us to "Shark Paradise" to discover a natural world preserved. On Moorea we discover the world of lemon sharks; on Ranguiroa that of hammerhead sharks and leopard rays; on Tikehau we dive with manta rays and on Fakarava we confront the famous wall of grey sharks. The aim of his association is to gather all the information available on the entire shark and ray species of Polynesia. A process that is of great interest to scientists, and to spectators.

FRENCH POLYNESIA

WHALE LOVE

L'amour des baleines

Every year, certain humpback whales migrate from the Antarctic to French Polynesia. From June to November, these isolated islands in the Pacific become their summer resort. (In 2002 Polynesia created a whale sanctuary). And each year the whales return to our waters in greater numbers. From time to time, they come face to face with us: the first encounter stays in the mind for ever. Whale lovers are those who go out to encounter them, day after day. They try to be accepted, to understand them better, to protect them better. Pacific Horizon introduces us to a few of them: like Michael Poole, who studies them, Denis Lagrange, who films them, Pierre Folin, who loves them and Thierry Summer, the man who swims with them. Destination Tahiti, Moorea and the Marquesas islands to meet these surprising mammals.

FRENCH POLYNESIA

THE LIFE OF THE REEF

La vie du récif

Coral is the basic animal of the coral atoll: without coral there's no atoll; without an atoll there's no coral, etc., etc. With global warming, coral has become weaker all over the world, has turned white and, on certain barrier reefs, has even died. And yet coral is essential to the survival of atolls. The coral barrier forms a natural protection against assaults from the sea, cyclones, storms and erosion. It is also a vast underwater forest where thousands of species find shelter. An aquatic fairyland that delights divers worldwide. Within the calm waters there's no shortage of endemic species, from here and from nowhere else. To protect the coral is also to protect the wild life that lives there. And, poetry aside, coral is also the larder for all those living along the shore, who are able fish there. When damaged, coral can also cause short-term harm such as ciguatera, more commonly known as "the scratch" because of the itching that it causes. When attacked, coral scars over, producing algae that is ingested by fish, which then pass on "the scratch" to the whole population, leading to a ban on fish consumption, which in turn is a disaster for the islanders!

COSTA RICA

COSTA RICA, A LAND FOR SALE

Costa Rica, une terre a vendre

Between the Pacific Ocean and the Caribbean Sea, the smallest country in Central America is now the planet's champion in biodiversity. However, for several years, the success of ecotourism has been driving Costa Rica into runaway urbanisation. Today the country is for sale, regardless of biodiversity. That is why the State has created the Environmental Tribunal. A battle has been engaged. The green judges have declared war on illegal property developers.

MEXICO

LA ISLA DE LA NATIVIDAD

It's a story of a small Mexican fishing community in a hostile area which has now become a model for the conservation of its maritime environment and resources. Today, around three hundred people live there. They are totally self sufficient. After having over-exploited its environment, the community has adopted a policy of strict conservation, going well beyond that imposed by governmental authorities. They have even created their own marine reserves. They have introduced a draconian surveillance operation to ensure that no one can loot them. This is their story...

CANADA

THE SANDMAN (CANADA: PROFITABLE OIL SANDS)**Le marchand de sable**

Dans le nord du Canada, la terre des Indiens abrite le plus grand projet industriel au monde : l'exploitation des sables bitumineux, le nouveau pétrole. Les multinationales en tirent aujourd'hui près de deux millions de barils par jours, cinq millions d'ici 2030. Mais le coût écologique de l'extraction est si exorbitant que les opposants font bloc. La production d'un baril de brut d'Alberta est dix fois plus énergivore que celle d'un baril conventionnel. Une pollution qui menace les grands accords climatiques de la planète. La Canada a même dû quitter le protocole de Kyoto pour extraire son sable bitumineux. Au cœur de la forêt boréale, les Indiens voient leurs terres saccagées par l'industrie pétrolière.

28'

GULF OF ADEN

THE LAST VOYAGE OF ALBERT LONDRES**Le dernier voyage d'Albert Londres**

On the night of 15-16 May 1932, the prince of French journalists still considered as the founding father of the "special correspondent"-dies in the fire on the Georges Philippar. The great white liner, flagship of the Sea Mail service, was on the return leg of its inaugural voyage between Marseilles and Yokohama: the imperial route! Albert Londres, righter of wrongs before the eternal, to whom we owe most notably the closure of the hard labour prison of Cayenne, boarded several days earlier in Shanghai. He had just spent three months in China, during the Sino-Japanese conflict. While he takes the opportunity afforded by the voyage to write a new exposure piece -whose subject was unknown- a fire breaks out at the entrance to the Gulf of Aden. Albert Londres will not survive. A terrorist attack? Sabotage? Or just another news story? Did the inquiry carried out at the time reveal the whole truth?

FRANCE

HIGH TIDE FOR FRANCE**La mer monte**

Rising sea levels looks like being of a problem than expected. Scientists now talk about a rise of about one metre by 2100. This rising of the waters will wreak havoc on the French coast. Will we give up land to the sea or not? Will houses, islands and villages have to be abandoned? What will happen to the waterfront havens of Languedoc Roussillon, or Brittany's Isle of Sein, whose average altitude is only 1 metre? What will happen to Picardy's Cayeux sur Mer, a town that is already below sea level? Its habitants and politicians are wondering how to anticipate the future. For the researchers, it's already time to think ahead and prepare. It will not be possible to protect everything whatever the cost..."

PHILIPPINES

DYNAMIT FISHING IN KALAYAN**Pêche à la dynamite au Kalayan**

One of the challenges facing sustainable fishing in the Philippines and islets of the island of Palawan is the prevalence of Dynamite fishing. Fishers create an improvised bomb out of a rum or Coke bottle and ammonium sulfate. The sound wave created by the explosion stuns the fish, which float to the surface, but it also destroys corals and seagrass meadows that can take years to recover from a single blast.

CAMBODIA

PLUNDER IN SIAM**Pillage Siamois**

In the scenic Gulf of Siam, off the Cambodian coast, we find tiny Koh Sdach, "King's Island". Following the Khmer Rouge's genocide, 600 families came here to live on its shores, fishing to survive. For the past few years, they have suffered dramatically due to the plundering of their waters by immense trawlers under the Thai flag that overfish the archipelago in violation of Cambodian law. However, certain governments seem to be profiting from the situation.

SOUTH AFRICA

COACHES AND SWIMMERS**Maitres et nageurs**

Aphelile has been able to swim since the age of 12. He lives some dozen miles from the centre of Cape Town near the Monwabisi beach that adjoins the last remaining "sharks" of Khayelitha, the most deprived shanty towns in the giant agglomeration. This is where Aphelile lives. He is one of the rare breed of top-level, Black South African swimmers. An exception in a community that is barely familiar with the sea. In Cape Town, Monwabisi is the beach for the Black population. It's a dangerous beach where every year the currents and the waves cause a string of drownings. A beach made all the more dangerous because most of those who go there cannot swim. For several years now, a swimming club at Monwabisi has been trying to knock the old ideas on the head: no, drowning is not a matter of fate; yes, Blacks can also learn to swim. This is Aphelile's mission.

FRENCH POLYNESIA

MAN AND THE TURTLE**L'homme et la tortue**

Kalami Taputu and his family are the only inhabitants of Mopelia, an isolated atoll in the Polynesian Windward Islands. They live exclusively from the sale of copra. For years Kalami has watched impotently as fishermen from Bora Bora or Maupiti come to poach turtles. On Moorea, Doctor Cecile Gaspar, a vet, runs a clinic set up in the Intercontinental Hotel that treats turtles sent to it from all over Polynesia -more than 160 turtles in 6 years. The Te Mana Ote Moana association, which she founded in 2004, conducts a major educational and tourist programme. In the field, one of the association's biologists, Mathieu Petit, has developed an underwater census system: the Manta Tow. However, the most efficient way is to entrust the protection of their turtles to the inhabitants of the various islands of Polynesia. Since 2006, the island of Tikehau has exercised that choice. With financial assistance from the Ministry of the Environment, the island's people have hired a turtle warden. His name is William Harrys and he's 50. His job is to ensure the well being of the turtles that come to lay their eggs on the island.

PRECIOUS FINS**Les précieux ailerons**

In Polynesia, as everywhere else in the world, the sharks are dying out! Since the end of the 50s the shark population has been reduced by 90%. A principal cause of this is "Shark Feeding"... a practice that entails cutting the fins off of live sharks and tossing the sharks back into the sea... in this way, 100 million sharks die every year, 3 per second. The Polynesian government has decided to react and protect the sharks. They have banned the practice of "Shark Feeding" over their entire territory. "Shark Feeding" is a means of attracting sharks with meat or fish... and the tourist Scuba divers, crowded around the diveleader, take their photos, a fleeting memory of an exceptional confrontation. But does Shark Feeding change the behaviour of sharks? Does it make them more aggressive?

AT THE SEA SCHOOL *L'école de la mer*

When you've lived in Brittany since you were a kid and you don't like school, there is an obvious way out: the sea. Anthony is 19. He is the son of a farmer but he has no intention of getting stuck in the fields. He wants to take off and become a fisherman. He has enrolled in the maritime high school at Paimpol and is trying to get his professional diploma in fishing. He knows nothing of the sea and has everything to discover. Vincent is 20. He is looking for a summer job and dreams of becoming a lifeguard. He has to prepare for the examinations in swimming and lifesaving skills that he hopes will get him a job on the beach. Cécile and Cottin are just 17. They have decided to become sailors in the Navy. As the college doesn't provide what they are looking for and they want a job right away, they are at the Ecole des Mousses in Brest. All of them are about to experience their first voyage at sea. But are they really cut out for that?

LIVINGSTON, GARIFUNAS EXPERIENCE *Livingston, l'expérience Garifunas*

It was a Rasta by the name of Koukoul who introduced me to the extraordinary and little-known story of his people: the Garifunas. They were the only blacks to have landed without shackles in the Americas. They should have been descendants of slaves, but for a few of them history played a curious trick. Two boats from Africa were shipwrecked in the Caribbean near St. Vincent, an island which had not yet been settled. They took refuge there as free men and mixed with the inhabitants, the Carib Indians. A few years later, they landed in Central America, in Guatemala, and founded Livingston where they still live today. That is the city Koukoul goes back to for a few weeks each year after spending the rest of his time on a factory ship in Alaska. In the midst of his Garifuna community, he celebrates their successful fight for freedom with singing and dancing.

COLORADO, STEALING THE RIVER *Colorado, les voleurs de fleuve*

The Colorado is the third longest river in the world. It rises in the United States and ends up 2000 kilometers south in the Cortez sea. To develop cities like Las Vegas and irrigate enormous swathes of agricultural land in the middle of the desert, the Americans built some ten dams on the Colorado. As a result only 9% of its waters reach Mexico. The Colorado delta is dying, along with its fish, mammals and plants. And its human population too. Today the delta has been reduced to 5% of its size, and all around has become desert, as far as the eye can see. A spectacular ecological disaster.

CALEDONIAN CURIOSITIES

Curiosités Calédoniennes

New Caledonia is a veritable sanctuary of biodiversity.

Created from the movements of the Earth's crust, it has retained a fauna, flora and a mineral world that are unique. With the Cook pine or the nautilus, these living fossils, it brings to mind those famous "curiosity cabinets" in Europe of the 17th century. These embryo museums, shrouded in mystery, exhibited rare objects representing the three realms of the living world alongside man-made creations. On the Grande Terre, nature has taken some special shapes and colors and one of the most remarkable man-made objects might be the gigantic mining operation going on there. Certain parts of the New Caledonian lagoon are listed as World Heritage. The inhabitants, aware they are the guardians of a veritable treasure, are backing the conservation movement. Let's push open the door on this cabinet of living curiosities, the stage for a real battle between economic necessity and respect for the environment.

FROM ISLAND TO ISLAND

D'île en île

Who has never dreamed of going far away, for just a while, or for ever? For a change of air, a change of life... Or simply to live out some new adventure. Brittany and its islands have never been short of bold adventurers setting off to seek treasure, excitement or just to try a human experience.

Patrick Saigot and his family settled on the Ile de Groix some 10 years ago. There they led a quiet, simple life till the day when the mussel farmer decided to up anchor and leave for the other side of the planet along with his wife, Faustine, and their three children. Destination: Madagascar with a new challenge to be faced. Patrick was going to open the first oyster farm on the island.

Madagascar is one of the poorest places in the world.

Patrick gave himself two years to pull off his gamble, two years to adapt the techniques of oyster farming, pass on his knowledge and offer a future to a village cut off from the rest of the world.

We followed the family from Groix to Madagascar... An adventure far off the beaten track, an adventure from island to island.

THE PENINSULA OF TREASURES

La Presqu'île aux trésors

Tautira, the "peninsula" coast of Tahiti. A delicate operation is underway. It's the delivery of fish spawn to the Tahiti Fish Aquaculture fish farm. Infinite precautions must be taken during the road journey from the Vairao Technical Fish Farm Centre to the floating cages of the farm. The swarm of spawn pours into the pure waters of the lagoon. They will take a year to reach a weight of one kilo. Getting to this point has not been easy. It took seven years to master the life cycle of this fish, the Platax Orbicularis (known here as the Parha Peue). The territory is conducting an extremely dynamic policy in the area of fish farming, banking on its future potential. In 2011, for the first time in history, people ate as much caught fish as farmed fish. At the farm, Thomas shows us the main stages in farming the Platax. We also meet his friend Tea, who presents a small aquaponics unit. This technique, dating back thousands of years, allows the simultaneous farming of fish and plants in a natural and almost self-sufficient ecosystem. The project is being closely monitored in relation to the future of fish farming and research is being devoted to it. Another small beast has been successfully farmed on the peninsula for some forty years now: the shrimp. Benjamin gives us a tour and shares his passion for fish farming with us. There are rewards, but also constraints in the production of shrimp. Gérard Cluzet, a biologist at IFREMER, is one of the shrimp pioneers in Polynesia. To him and his fellow team members we owe the protocol for shrimp reproduction and farming. The peninsula possesses two treasures here in matters of fish farming and they need to be protected. The growing needs of humanity, the pressure of over-fishing and the dwindling of fish stocks mean that this activity will certainly become indispensable.

JASON - PEOPLE UNDER THE SEA

Jason - Statues sous la mer

Nobody had thought of it but he had the idea. Nobody would have dared to do it, but he did it. Jason Taylor is a young English artist. An artist who has spent a long time as a diving instructor. He has two loves: the beauty of underwater landscapes and creative sculpture. Why not combine the two, and put statues on the seabed? And why not create a huge underwater museum that you can visit in diving-suit or admire from the surface with a mask? That's what Jason Taylor has done, first by himself on a small scale on Grenada Island, and then by directing a mammoth project in Cancun, on the Caribbean coast of Mexico. And as you might well imagine, concrete statues rapidly undergo some big changes underwater: they become covered with curious and fascinating plants, their expressions change, so that their faces are no longer recognizable. Fish come to play and crustaceans take refuge in this maze of artificial reefs. But having fish wandering around the museum is fine. One of the goals of the operation is to save the underwater environment in Cancun, Mexico. This film invites you to follow this first ever project of its kind from the first stages to the final apotheosis.

Winner of the PALME D'ARGENT at the Marseille underwater Film Festival 2012

PACIFIC OCEAN

LORD HOWE ISLAND

Lord Howe Island

The remnant of a volcano, rising from the sea. Two mountains attaining a height of over 800 metres curving round a lagoon inhabited by tens of thousands of multicoloured fish, teeming among extremely rare corals that are intact and quite unique, since they are the furthest south in the Pacific Ocean. The tiny Lord Howe archipelago, off the coast of Australia, encapsulates the landscapes and marvels of the South Pacific in the space of 12 kilometres. Since its consecration by UNESCO as a World Heritage Site its 300 inhabitants face the thousands of constraints which go with that honour. Here the rules are even stricter than on the mainland. The goal of the Island Council is not only to preserve the natural habitat in all its glory, but also to try to get it back to its state before Man arrived in the 19th century. It will go to any lengths to achieve that. The latest extravagance is the reintroduction of a giant insect that everyone thought was extinct. A vast programme is underway, which may seriously perturb the lives of the islanders...

CAPE VERDE

THE SAND THIEVES

Les voleuses de sable

With steep slopes, lush valleys and dream beaches, Cape Verde is a small corner of paradise lost in the middle of the Atlantic – a thin sliver of land left to the whims of the ocean. However, despite appearances, these rocky islands do not have many riches to offer their inhabitants. Most raw materials are imported - all except sand. This has become the only source of income for the women of the archipelago, who sell it on to the rapidly-growing building industry. Every day, there are hundreds of them literally scratching out a living, burrowing and sifting on the beaches. And when there is no sand left, they dig even further... out into the sea. The ecological consequences are devastating. On Santiago, the main island, this pillage continues on a daily basis. The beaches are disappearing and salt is moving inland, wiping out whole plantations. The government of Cape Verde has prohibited the removal of sand and defines it as a critical resource. Nevertheless, alternative solutions are hard to come by - and in a country with high unemployment, women have no other choice than to be sand thieves.

IRAQ, THE SHADOWS OF WAR

Irak, les ombres de la guerre

Constant wars, embargos and border tension have transformed Iraq's sole opening to the sea into a living hell for the men and women who live in the region. A ghost port, a graveyard for hulks... Amidst the ruins, however, Basra is trying to revive its glorious past. For the first time since the American invasion of Iraq, a team of reporters has been to see what thirty years of war have done to the city, its estuary and its people.

ST PIERRE &
MIQUELON

RAVENEL: THE SILENT VOICES OF ST PIERRE

Le Ravenel

On January 28 1962, at Saint Pierre-et-Miquelon, near the Ile aux Marins, the trawler "Le Ravenel" disappears with 15 seamen on board. Some fifty years have passed and the island is still profoundly marked by the tragedy. Not a trace. Not a single survivor. No certain explanation of the cause of the sinking. A mourning that is extremely painful for the families. All that remains are the questions, the doubts and the suppositions that arise with every fresh discovery or account. All that remains also are the suspicions regarding the inquiries, which many consider unfinished and rigged to conceal a truth that cannot be admitted. And, finally, all that remains is the burning passion of those who devote their time and their money to finding the wreck and obtaining some shred of truth.

THE LAND OF THE MERMAIDS

La terre des sirènes

Mermaids exist. We've seen them. To be honest, they don't have quite the charm that they are attributed in the tales of seafarers. What confusion there must have been in the minds of those long-haul seamen because your imagination must be running wild to confuse a mermaid with the animal that inspired its myth: the dugong. A marine mammal with generous curves, certainly, but which can grow to four metres and weigh up to nine hundred kilograms. Nobody will hold it against the myth makers. The legend of the mermaids feeds our fantasies and will survive for all time. However, for the dugong, things are not so sure. Today the dugong is the animal that is most under threat of extinction. In the Indian Ocean, pollution, urbanisation of the coasts and hunting have virtually decimated them. Although CITES* has banned the capture and trade in dugongs, in many countries it has already disappeared completely. It is in the Persian Gulf and, more especially, in Australia, that you are most likely to find them. On the island continent, the dugong is scrupulously protected and the authorities don't stint on resources. At the same time, aborigines and the natives of the Torres Strait still have the right to hunt them for food. A custom that is non-negotiable, but now regulated. *Convention on International Trade in Endangered Species of Wild Fauna and Flora, known by its acronym CITES, or the Washington Convention.

FRANCE

THE BELEM

Le Bélem

The Belem? Everybody knows it. The 'Trois mats', last of the great commercial French sailing boats of the 19th century still navigating, is a remarkable witness to French maritime history. A merchant ship, a pleasure boat, and today a shipping school, its noble allure traverses the centuries, and its functions never cease to evolve. It is astonishing that there has been so little documented regarding daily life aboard the Belem; the way the crew live day by day, the intimate ties they have with their boat and the transmission of wisdom they are responsible for. For ten days we follow these sixteen men, as they sail the boat alone or guide apprentices from all around the world...

THE NORMANDY

Le Normandie

When France declared war on Germany on September 3 1939, the Normandie had just docked in New York. Moored at pier 88, this majestic trans-Atlantic liner, flagship of the French luxury fleet, will remain safe from the conflict. Her fate takes a dramatic turn, however, in the winter of 1942. America has just entered the war and Roosevelt decides to requisition the Normandie to ferry troops to the European front. During preparation work a fire breaks out on board, causing the loss of the ship. On February 10 1942 the Normandie ends her career at the bottom of the Hudson River. Accident? Or sabotage? The docks of New York are the backdrop to this incredible maritime story. An intriguing investigation where we encounter the American naval secret services, saboteurs from the "Cagoule" (a right wing extremist organisation) and finally the New York Mafia and its infamous godfather, Lucky Luciano. In the end, the Normandie will have sailed a mere four years. Long enough to enter into legend.

THE FORCED LABOURERS OF THE LAGOON

Les forçats de la lagune

In the middle of the night they dive and dive again into the murky waters of Lagos lagoon. Equipped only with simple buckets, most of the time naked, they scratch at the bottom ten feet below to scrape up the sand before the sun becomes unbearable. Slowly their pot-bellied ships are filled, one free dive after another, and then they hoist the sails and head back to the village. These forced labourers of the lagoon might be right out of deepest antiquity, with no other power than their muscles and the wind. Thousands of dives to provide the capital's construction sites with its raw material. Harrowing work, but with a timeless beauty. At dawn, as the Nigerian capital is awakening, sailing boats with sumptuous patchwork sails glide softly to their home port. The men are exhausted. The images are resplendent. Then they must off-load the sand, basket by basket. The boats are built on the beach, the sails sewn in back yards out of rice sacks and the trucks gnaw at the mountains of sand erected by the men. And yet, the whole sand economy is run by women, in this violent country, which long ago granted them equality. Pauline is the owner of a boat, and of a crew. She runs her little business like an astute businesswoman. Without voyeurism, sharing the lives of the workers, Thalassa spent several days aboard these boats in the company of the sand divers. A report on one of the many faces of people at work and an incredible human adventure.

MADAGASCAR

FORT DAUPHIN IN BLACK AND WHITE

Fort Dauphin, en noir et blanc

In Fort-Dauphin, everything has changed over the last few years. Before it was a sleepy little town in the south of Madagascar. No road to get there, no industry, often no electricity, just a tiny port lost in the middle of an immense and magnificent bay. The little town was something of an attraction for curious foreigners: it was like a little tropical paradise. Then one day big decision was taken. The Madagascan government signed a contract with Rio Tinto, a multinational specializing in mining operations. This company started to develop the world's largest mine for Ilmenite, a mineral containing iron and titanium, which is mainly used in plastics and paint. It was a revolution! The biggest deep-water port in the Indian Ocean was built, with a total investment of around 850 million dollars. Obviously most of the inhabitants lives were turned upside down. The seemingly miraculous inflow of money has created a considerable economic boom, and hundreds of jobs. But as with all revolutions some people feel that they have suffered. They sold their land under pressure and now they have nothing. And in Madagascar land is often all you have to leave to your children after a lifetime of work.

Every age has its fashions. For several years now a tiny South American village has become established as the new glamour destination. Just a few miles from the major seaside resort of Punta del Este, José Ignacio was until recently just a tiny fishing village battered by the winds. Today, international stars like Ralph Lauren, Shakira and Naomie Campbell have made this astonishing place their choice. Every New Year, the population of the village increases one hundred fold. The jet set arrives discretely to party and find a unique balance between luxury and authenticity. Who pointed the way to his tiny patch of land in the South Atlantic? Why have they chosen this place rather than another? How are the locals coping with being suddenly fashionable? Will José Ignacio put that mythic village of Saint Tropez in the shade?

20'
FRANCE**HARRAGAS****Harragas, arrière plan**

Frontignan, January 2009. In the biting cold of this bitter winter a film is being made. As if it was an emergency. Most of the sequences happen in the water, in a miserable little boat, into which are squeezed several young men and a young woman, all Algerian. That's in the script. It's the story of the Harragas, which means the 'burners'. They choose to make their past go up in smoke by burning their papers. They prefer to risk everything rather than stay in their country. It's not easy shooting in these conditions, sitting on a barge for hours on end, bouncing up and down on the winter waves of the Mediterranean. The technicians are in an endless confrontation with the sea. It's no super-production. The young actors seem intimidated by the situation. They stick together and don't mix with the film crew. Some of them only speak Arabic and feel rather lost in the port of Frontignan.

THE LURE OF AN ISLAND

La tentation de l'île

You don't come to Filicudi by chance. This is the most distant, the wildest, and the oldest of the Aeolian Islands, born as a marine volcano, a million years ago. The landscape is harsh, rough, angular. Here, there are no big hotels and no special attractions. A few scattered clifftop houses, lost among the vegetation, in a wilderness of volcanic rock. This is not an island for everyone but it seems that once you have set foot on it you might not want to leave. For Marina, Monica, Giovanni and Francesco it's a bit like the island of Peter Pan. One day they decided to leave everything behind to be closer to nature, fleeing the chaos of the city to get back to essential values. They chose Filicudi. Perhaps we all have a dream island waiting for us somewhere.

19'
FRANCE

WHAT'S IN THE WATER

Histoire d'eau

In 2009, the simulations made by the Surfrider association on the quality of bathing water came like a cold shower: if nothing is done, by 2015, 10% of French beaches will be banned to bathers. And a quarter of them will see their water quality down-graded. You won't suspect anything when you go to take a swim this summer, but coastal local authorities are developing a wealth of ingenuity to guarantee you safe bathing. And to keep their beaches open as long as possible during the season. The quality of the water is a big attractive argument. But do you know what the criteria are for such quality? What do we look for? Is a "Blue Flag" floating before your eyes any guarantee? And what are the threats hanging over our beaches? Today, the quality of bathing water has become high stakes for every community along the seashore.

THE OYSTER FARMER WHO BLEW WALL STREET APART

L'ostréiculteur, qui a fait exploser Wall Street

Like all rich New Yorkers, Mike Osinski one day buys himself a magnificent secondary home on Long Island, at Greenport on the Peconic Bay to be precise. He learns that the place is a famous centre of American oyster farming. Without really knowing how to go about it, he decides to farm a few oysters at the bottom of his garden and becomes an oyster farmer. And so his second life begins... because before that Mike was a big shot on Wall Street, directly implicated in the subprime crisis that is shaking the world today...

ZAMBIA

THE MIRACULOUS BEE OF THE LUNDAS

La miraculeuse abeille de lundas

We know about the big wild beasts of Africa... but Sarah Carpentier set out in search of the tiny beast... the Zambian wild bee, to be precise. After two days along tracks, she plunged into one of the largest tropical forests in the world and met the country's traditional beekeepers. For two centuries the Lunda tribe has been setting hives in the trees, 50 feet above the ground and they produce honey that is incredibly pure. Today, this nectar is worth its weight in gold... the Lundas' honey is purchased by an organic brand and marketed in Europe. A fresh perspective for one of the poorest tribes in Africa.

REUNION ISLAND

THE NUT CASE RACE

La course des fadas

They call it the Diagonal of Fools. The Grand Raid, which is held every year on Reunion, is one of the most testing races in the world. This year 2,700 runners will cover 170 kilometres of tracks that cross the landscapes of the island listed as a UNESCO world heritage site. During the race, however, it's hard to admire the view. You have to commit yourself to take on the mud, the rain, the solitude and the lack of sleep. Those first home will take over 24 hours to reach the finish line; the stragglers will go more than 3 days without sleep. Once you start up a canyon or climb a mountain it's difficult to turn back. Three competitors explain what motivated them to partake in such a challenge. They each have very personal reasons for wanting to push back their limits.

ENGLAND - FRANCE

THE LANCASTRIA

Le naufrage du Lancastria

On June 15 1940 the steamer Lancastria leaves the English port of Plymouth bound for Saint-Nazaire. Its mission is to embark English and Polish troops. The Lancastria already has a considerable number on board when, around 2pm, the Germans launch an air attack. The Lancastria is hit by a salvo of bombs. The Lancastria lists, turns over and sinks in 24 minutes. Two sinkings, two martyred ships in the year 1940. Sixty years after the events and nearly three generations later, fresh investigations are opened and the mysteries subjected to the scrutiny of historians.

THE LERINS ISLANDS, AN ENCHANTED BREAK

Lerins, une parenthèse enchantée

Sainte-Marguerite and Saint-Honorat are two small islands off the Canne's croquette. A genuine haven of peace with untouched wilderness, they have protected their singular identity and are one of few idyllic settings. Despite the frenzied crowd that disembarks every day in the summer, the Lérins Islands remain a unique paradise where time seems to have stopped. Follow this guided tour for an unusual stroll around these two islands where several worlds meet. Amusement, nature, culture and discovery are the main ingredients of this insular cocktail that is worth seeing!

FRANCE

THE FOULEES DU GOIS

Les foulées du Gois

Since the eighteenth century there has been a two and a half mile causeway connecting the island of Noirmoutiers to the mainland, emerging and disappearing with the tides. This unique site is known as the Passage du Gois. Since 1987, an equally unusual race has been held there. Once a year, a selection of thirty top class athletes race against each other, although it is really a race against the rising tide. Accompanying several key characters, we plunge into the 'Foulées du Gois', to see what goes on before and especially during the race. On land, at sea, and in the heart of the action. It's a race strictly for enthusiasts where the best athletes on paper are rarely the winners and the most important person is not a runner but the starter. Like we said, this race is like no other.

FRENCH POLYNESIA

IN THE LAND OF TURTLES

Au pays des tortues

Around a hundred turtles are caught every week in French Polynesia to end up most often on the plates of rich Tahitian worthies! Turtle meat is still highly prized amongst the Polynesians—in Papeete they are ready to pay more than 250 Euros for a 5kg pack. Knowing that a turtle can often weigh more than 100 kilos, the profits for poachers are substantial. On average an adult turtle can fetch up to 20,000 Euros. Especially during the laying season between the months of August and January. And yet this animal is one of the species protected by the Washington Convention! So when the customs service gets involved sanctions are heavy. Moana had that painful experience. Arrested with two turtles poached off the coast of Tetiaroa, he was sentenced to 6 months imprisonment, his boat was seized and he was ordered to pay a fine of more than 10,000 Euros. Michel Arakino was the only one to extend a hand. Michel eats turtle meat but doesn't deal in it. Tattooed to his fingertips, he is an impressive figure. "Honu, turtle in Polynesian, is in our genes, our flesh," as he puts it.

PHILIPPINES

TAU'T BATU

Tau't batu

They have been walking for hours through the jungle. They come from the high plateaus to the south of the island of Palawan in the Philippines, abandoning their houses on stilts and their fields to escape from the typhoons and torrential rains of the monsoon. They do this every year. They migrate to the mountains and seek the sanctuary of their cliffs, peppered with caves and rocky shelters. Together we reach the cave of Signapan. What do we know about them? They spend the five months of the monsoon season here and they feel at home. Their families have occupied the same caves for generations. There are only a few thousand Tau't Batu left. The name means "people of the rocks". The Manila government accords a strict protection to their homeland, hours on foot from the nearest village, on the edge of the jungle, at the edge of the world.

GREECE

HYDRA, NO NOISE, NO RUSH

Hydra, sans bruit et sans fureur

A passing visitor to Hydra doesn't notice it right away. But, very quickly, he senses that something is different: that something is missing and that it's not at all unpleasant. And, sure enough, this island is special in Greece, unique...

It's one of the rare spots in the world where there are no motor vehicles. Not a car, not a motorbike, not a motor scooter! Nothing, apart from two tiny garbage trucks, an ambulance and two fire-cars, which practically never ever go out. It has to be said that this village of 2,500 and the rest of the island have never allowed the car in. The lanes here are narrow, and there are steps everywhere... And, most important, traffic has been banned since the island was listed in the 1960s as a result of the campaign led by actress and singer Melina Mercouri. Result: on Hydra, you walk... a lot. A portrait of these courageous and stubborn Hyrdiotes.

GREECE

MILOS, THE KINDLY VOLCANO

Milos, les bienfaits du volcan

Milos is unique amongst the Greek islands. A tiny patch of earth of 160 km² with extraordinary mineral wealth. Because Milos is a volcano, a sleeping volcano to be sure, but with just enough wreathes of smoke in its crater to remind the island's 5,000 inhabitants of its presence. As one eruption followed another (the last dates back 80,000 years) it formed the rocks to provide a veritable treasure store that men have been exploiting for thousands of years. This volcanic activity has also created exceptional and bewitching landscapes and a large part of the islanders today live from this "fire from the earth". And some others in a more unusual fashion.

SCANDINAVIA

LOFOTEN ISLANDS: FOR THE LOVE OF COD

Aux Lofoten, la morue est reine

Nestled at the world's end, in northern Norway, the Lofoten islands offer a surprising scenery. Peaking at over 1000 meters above sea level, the picturesque mountains are surrounded by turquoise waters. Situated above the Arctic Circle, the islands nevertheless enjoy mild temperatures thanks to the warm air brought in by the Gulf Stream, which protects the seven-island archipelago from extreme weather conditions. Thanks to this exceptional climate, life in Lofoten is surprisingly frantic in the middle of winter. Every year, between January and April, the world's largest reserve of cod migrate to the tiny archipelago to spawn en masse. A miraculous fishing follows, feeding the region since the 10th century! Once dried, the fish is referred to as 'salted cod', before making its way to the Portuguese, Spanish and Italian markets.

THE LAST FLIGHT OF ST EXUPERY *Le dernier vol de Saint Exupery*

On July 31 1944, the Lightning P-38 of Captain Saint Exupéry, which took off at 8h45 from the aerodrome of Bastia-Borgo, was heading for the south of France on a reconnaissance and photographic mission in preparation for the landings in Provence. In 1998 a fisherman from Marseilles pulled up a chain belonging to the lost aviator in his nets. The first object directly linked to the lost author. That was all it needed to reignite the mystery that so many devotees have been trying to resolve for 60 years.

16'
SOUTH AFRICA

THE WHITE CAPE *Le Cap, la blanche*

Lying nearly 10,000 kilometres from Amsterdam, Paris or London, Cape Town is without doubt the whitest and most European city in Africa. An enclave in the heart of the black continent. Just as it was in the sixteenth century when Dutch pioneers or French Huguenots were touched by the grace of the location and never left it. They created a jewel out of this extreme point of Africa, transplanting their architecture, their interiors, their customs, their spirit of enterprise. Three centuries later, with Apartheid abolished, the descendants of those Cape pioneers, whether of Dutch or British origin, perpetuate a way of life at the very end of the African continent that is quite apart. Nowhere else in Africa do they hunt to hounds or play cricket with such passion. Nowhere else in Africa do they produce so many cheeses and wines, on estates that are still called "La Provence" or "Le Bonheur".

BRAZIL

IN THE AMAZON'S WILD WEST

En plein far-west amazonien

Christophe Cousin begins his journey in the heart of the forest, at the iron mine of Carajas, in the heart of the Amazonian wild west. It is the largest iron mine in the world. A train trip and a few days later, he stops in Serra Pelada, where there are "cowboys" on every street corner. Obviously this is no longer the gold mine portrayed in Salgado's photos in the 80', but it still retains a good measure of gold rush spirit. They keep digging and they keep looking... Chico does it in his kitchen. Underneath, he has a shaft 90 feet deep where he still nurtures his hopes of wealth. But times have changed. Now the giants of the mining industry are casting their shadow over his hole. Our route also crosses the region of Eldorado dos Carajas. Here, the forest gives way to ranches. We meet real 'rancheros', cattle ranchers with branding irons and jingling spurs. The train stops at Sao Luiz, in the state of Maranhão, which was colonized by the French. The town's historic centre has remained almost intact, while at its port the iron reaches the sea.

NORTH SEA

SYLT : THE SAINT TROPEZ OF THE NORTH SEA

L'île de Sylt: le St Tropez de la Mer du Nord

The island of Sylt is part of Germany's heritage. The Saint Tropez of the North Sea, tourists, the rich and famous and more ordinary people all head to this island "en masse". In the tourist season, the island's population swells from 20,000 inhabitants to one million. However, Sylt is no German Ibiza. There are no large buildings or disfigured landscapes. On the contrary, Sylt has managed to remain natural and wild, which no doubt explains why a square metre of land in Sylt is worth the same as on the Champs Elysees... Yet a shadow hangs over Sylt: the island's days are numbered. This 30 km long by 400 m wide beach is disappearing little by little, pulled away by the sea. Each year, it is estimated that 1.50 m of the coastline disappears. Residents and summer visitors alike have learned to live with this ever-present threat.

ISLAND EMERGENCY SERVICES

Urgences dans les îles

In French Polynesia the word has entered common parlance: to be "evasaner". In other words to be evacuated for medical reasons. In a territory that is as big as Europe, distances mean that Emergency Medical teams must literally "fly" to the aid of the injured and the sick. A single medical system that is tending to grow at the expense of medical services on the islands. Fewer dispensaries on the remoter islands and a concentration of resources on the hospital complex in the capital, Papeete. When the nearest hospital is more than 1,500km away, it's like flying out of Paris to aid a sick person in Bucharest! And to give birth, women sometimes have to start out for the maternity hospital a month before term. In every case, the plane is the only means of saving or delivering life.

MADAGASCAR

THE MUTINEERS OF LIBERTALIA

Les mutins de Libertalia

They say that Libertalia, a republic of pirates, saw the day in the north of Madagascar at the end of the 17th century. This singular adventure is described in the encyclopaedia of piracy, published in 1724 under the name of Charles Johnson. "A General History of the Robberies and Murders of the most notorious Pyrates" describes the habits and customs of these much-feared men and women and gives more than a little detail on Libertalia. Captain Johnson recounts the adventures of Misson, a French pirate. After having roved the Caribbean, Misson ventures into the Indian Ocean in search of a permanent refuge, an Eldorado where he can put his ideas of brotherhood into practice. Archaeologists, divers, historians... they all have their ideas whether this story is true or not. From Madagascar to Paris, to Washington, we have hunted down the last remaining vestiges of this pirate Utopia, created a century before the Revolution.

BUTHAN

IN PURSUIT OF THE YETI

A la poursuite du Yeti

The yeti: a hairy primate, a bear or a legend? For the Bhutanese, he is very real. He's said to have a strong odor and carries a sac on his back to kidnap his victims. He lives in the most secluded mountains and forests in the country and in the forgotten valleys of Merak and Saktand (which only recently became accessible to foreigners). Our investigation begins at the Timphu library. After seeing a picture of the yeti's face in an old book entitled « Mirror of science », we decide that it's time to set up an expedition to find him, and so we set off to the East of the country. Guides, cooks, a string of caravans, horses and yaks; all were necessary in order to make our way across the rivers and mountains in pursuit of the country's mythical creature. Brokpas and the regions inhabitants attempt to advise us on the best path to follow...

YANN KERSALE : AN ENLIGHTENED ARTIS

Yann Kersalé : un artiste éclairé

Yann Kersalé is an exceptional artist. A native of Douarnenez, the young Breton experiences his first emotional encounter with light as a young child. The event leads to a life made of art and light. Light is his medium, his paint, his clay. He uses it to sculpt forms and clothe some of the most emblematic buildings of our daily lives in their night-time attire. From the Quai Branly Museum to the Eiffel Tower by way of the Bastille Opera House, this prolific artist is all over not only France, but the whole world. He has been collaborating with Jean Nouvel for more than thirty years. An eccentric artist, for sure, but also an extremely talented and inventive one, Yann is an astonishing character.

MONACO

YACHT PEOPLE

Yacht people

At the end of every summer, the finest yachts in the world make a date in Monaco for the biggest luxury yacht show in the world. Every year the world's largest fortunes come to market to sell, to buy or keep up with the latest innovations in yachting. But behind all the display of luxury and wealth lies a massive organisational effort that we decided to film. From the show's director to the port officials who, within a few days, must fit some hundred yachts into a pocket-handkerchief sized space, we opened the tightly closed doors behind the scenes at the 21st Monaco Yacht Show.

RETURN TO QUEMENES

Retour à Quemènes

Three years ago Thalassa brought you the beginning of an extraordinary adventure: David and Soizic, a young couple, were chosen by the Coastline Conservation Department to bring new life to a tiny, desert island in the Molène archipelago of Brittany. At that time our "apprentice islanders" had set themselves the goal of turning an abandoned farmhouse into a bed and breakfast establishment. Three years later we wanted to know what has happened to David and Soizic, did they rise to the challenge and did they survive on this tiny rock in the Iroise Sea?

TREASURE HUNTER, A PORTRAYAL OF LUC HEYMANS

Chasseur de trésor, portrait de Luc Heymans

In February 2004, Luc Heymans dived for the first time to a 10th century wreck 58 metres below the surface off the coast of Indonesia. He was about to discover one of the oldest commercial vessels ever found, with 500,000 items of Chinese porcelain on board, forming a dome more than six metres high. 250,000 pieces were in perfect condition. It would take months to excavate this archaeological treasure, which experts have valued at between 60 and 80 million dollars. Heymans was already a veteran seaman. He was Tabarly's mate in round the world races, and skipper for 20 years in offshore races such as the Trans-Mediterranean, and the Transatlantic. As a ship-owner of fortune, he puts his vessel at the service of licenced treasure hunters, criss-crossing the seas of South-East Asia, learning a craft which has become a passion.

MAURITIUS

THE WRECK OF THE SAINT GERAN - THE LEGEND OF PAUL AND VIRGINIE

Le naufrage du St. Geran

Off the coast of the little fishing village of Poudre d'Or on the island of Mauritius lies the wreck of a most unusual ship. The Saint Géran is certainly the most famous wreck in French literature because it inspired a novel that sold over 25 million copies: Paul et Virginie. In August 1744, as it approached its final destination, the island of Mauritius, the Saint Géran, a vessel of the French Indies Company is trapped upon the reefs and sinks, leaving more than 200 dead. Among the victims was a certain Virginie, whom Bernadin de Saint Pierre was to make his heroine. Everybody on Mauritius knows the story because the Saint Géran is a myth that has entered into local folklore. And yet many questions still remain. How much is fiction, how much reality? Did Virginie really exist? All these questions are addressed in the shape of an investigation that swings constantly between reality and the storybook world.

SRI LANKA

HMS HERMES

Le HMS Hermes

HMS Hermes was the world's first aircraft carrier, designed and built for the Royal Navy at the beginning of the 20th century. In 1942, HMS Hermes was patrolling off the coasts of Sri Lanka and was caught up in the action in the Indian Ocean that saw Japanese forces confront the British and Australians. Under attack from 70 bombers, the aircraft carrier sinks beneath the waves. The British navy mourns the loss of 307 men. 590 military survive the attack. The loss of HMS Hermes remains one of the heaviest losses of the 20th century and of the Second World War. It was a strategic moment in the conflict that Winston Churchill described as the "most dangerous moment" of the war.

FRANCE

THE TREASURE OF THE PRINCE CONTI**Le trésor du prince Conti**

The Prince de Conti is making more waves from the bottom of the ocean than it ever did while sailing the seas of the world. Without a doubt this wreck excites more controversy than any other. In any case it is the most cursed as everyone who has gone near it has had his fingers burned. Because the Prince de Conti is not a wreck like any other. While sailing back from China and India, the ship, chartered by the Indies Company, sank with a cargo of gold and other precious objects. It has everything it needs for the Conti affair to fill the scandal pages of the press: arrests, prison, and intimidation. The story of the treasure of the Prince de Conti reads like a good mystery novel whose ending has yet to be written.

THE LOVE CRUSADE**La croisade de l'amour**

Lisdoonvarna, a small town set in the Irish countryside to the west of the island. 800 souls and a dozen pubs strung along a main street. Lisdoonvarna is a windswept spot way off the beaten track, a sleeping beauty who awakens once a year in September. For six weeks the town becomes the gathering point of every available heart in Ireland and from elsewhere. The Guinness flows, music is everywhere and couples stroll, entwined, in the street. In the space of an evening, 40,000 people come through. Maybe more. This extremely popular festival is written in Irish history. It was in this spa town, the country's only one, that tourism was born in 1716. They came from all over to treat their rheumatism... and to take a wife. After the harvest in September, the farmers come here to strike the deal, through the intermediary of a matchmaker. The tradition is carried on today thanks to Willie Daly, the last matchmaker on the island. He works from home, all year round, for local farmers, who are too shy to speak for themselves. And during the festival for merry-making tourists there are those who believe. Some even manage to find love. And others who come principally for a good time, for the 'craic', the atmosphere, which is a typically Irish mixture of good humor and lots of alcohol. We discover them all (the farmer looking for a wife, the tourists on the razzle, the couple who got together here and who return to celebrate their love) in this corner of Ireland that is close by the cliffs of Moher.

SOUTH AFRICA

CAPE TOWN AT THE WATER'S EDGE**Le Cap, les pieds dans l'eau**

Capetown is one of the most attractive cities in the world, a desirable destination not only for its geographical location at the very end of Africa, but also for its natural beauties. Among the most visited parts of the city, there's a special place, a sort of architectural and commercial showcase: the "Waterfront", a collection of shops, restaurants, hotels and boutiques right in the centre of the historic port. From here you can take a boat ride to Mandela's former prison or go shopping as in any other mall in a developed country. Here they combine cultural tourism and leisure, five-star hotels and fast-food. Every year more than two million visitors jostle along the secure, policed docks that have, separated from the rest of the city and the segregated suburbs, become a sort of Champs-Élysées of South Africa. For dozens of maritime cities all over the world, the success of South Africa's "Waterfront" is an example. They want to understand and copy the "Waterfront's" recipe so they too can take fuller advantage of this business on the water's edge, in the middle of a still-active fishing port.

NEW CALEDONIA

AN EYE ON THE PEBBLE

Un oeil sur le caillou

Seen from the sky, New Caledonia offers sumptuous and varied landscapes. Mountains, a lagoon listed as a UNESCO world heritage site and luxurious vegetation such as we dream of on Robinson Crusoe's island. New Caledonia also presents a subsoil that is rich in minerals. Its red earth contains chrome, iron, copper and, above all, King Nick... nickel. An economic manna for the island, but also a major ecological risk. All these fragile resources that make up the island's attraction must be protected in order for them to continue. During our trip we go to meet the men and women who, through their actions, are trying to conserve Nature. We fly over the south of the island with Martial Dosdane. From his helicopter he takes photos and keeps a watch over the environment. We raise giant clams with the Yambé tribe in the north east of Grande Terre. Still in the east Josette will take us to discover the mangrove where she grew up. We leave the coast to go and plant trees with the inhabitants of Gohapin in the centre of Caledonia and finally we set out for the virgin territory of the Loyalty Islands, a dream location that is still preserved.

PLASTIC ART

L'art plastique

Anita Ahuja is a designer. A convinced environmentalist, she has chosen to recycle plastic bags to create fashion accessories and founded an NGO called Conserve. But Anita's project and her creativity, her designs, have a context. She never forgets that those fashion items come from the toil of labourers who work all day long handling garbage. And doing something for those people's lives is really important!

13'
INDIA**MEERA, KAVITA, SHANTI... AND THE OTHERS****Meera, Kavita, Shanti et les autres**

Kavita, Meera, Shanti and the others have had to fight to make their dreams happen. Together they have started their own newspaper, Khabar Laharia. The unusual thing about the editorial team is that it is made up entirely of women, who are all members of low castes like the untouchables. In the state of Uttar Pradesh, where illiteracy is higher than the national average, this handful of women journalists battles every day to bring information to their fellow men... and women.

13'
INDONESIA**KAWA IJEN****Kawa Ijen**

"Seeking young man, good health, good physical condition, sure-footed, not clumsy, for post of miner: remuneration 15 times that of an agricultural worker, 15 days off per month, possibility of accommodation on site, free transport.. Duration of contract... uncertain." If it were to be published one day that would be the job description for the miners of Kawa Ijen; The name, which means « green crater » in Javanese, is inspired by the pretty woodlands which clothe its flanks. But once inside, right in the mouth of the volcano, is an open sulphur mine which is a living hell.

13'
INDONESIA**MERAPI****Merapi**

When you're getting on for 75, and still gambolling on the hillside like a young girl at an altitude of 6,000 feet, you don't worry about that big cone smoking above your head. It's just part of life. Trisno, who gleans wood on the slopes of the mountain, is not scared of Merapi, which the volcanologists consider to be one of the most active and dangerous volcanoes of the planet.

12'
FRANCE**FINAL SIGNAL****Signal de fin**

The last days of "Le Signal" residential home in the community of La Pointe du Médoc have arrived. The official letter written by the Mayor to each of the occupants leaves no room for doubt. The four-story block, built less than half a century ago and consisting of 78 dwellings, has long been threatened by the erosion of the beach. This year the inevitable happened: the high tides and battering winds have dashed the last hopes of the Signal's residents. It's heartbreak!

Jacqueline Gandoin, 81, has lived on the ground floor since 2005. She is leaving her three-room apartment to move into the old folks home in Soulac. "It's like a serious illness, you say to yourself... Dear Lord, allow me a little more time. Ever since Storm Xynthia in 2010 I've known that it was over. But it would have been nice to have had one last summer..." are the 81-year-old's final, resigned words.

12'
FRANCE**CRACKPOTS ON THE DYKE****Les dingos de la digue**

When the sun shines in Dunkirk, Malo-les-Bains turns into a Riviera seafront with its café terraces, restaurants and family-friendly beach. Yet, just a few hundred yards away, there's another beach, more secret, wilder and much more "exotic". The Braek dike lies between the factories set up around the port and the open sea. A decree from the Prefecture bans access to it, but the authorities prefer to shut their eyes, aware that this tiny piece of shoreline is part of the local heritage. Since its construction in the 60s, a whole world has been rubbing shoulders on the Braek dike in a good-natured atmosphere. On one side are the factories with their huge plumes of smoke, on the other the vastness of the North Sea, and between the two slices of life, stories, moments of happiness.

12'
FRANCE**CAMPING UP NORTH****Un camping au Nord**

As holiday makers plunge into the traffic jams and head for the sun, we decide to test holidays in the north. So we set down our bags (and our prejudices) in the most northerly campsite in France, at Bray-Dunes, on the Belgian border, set on the sands of a beach that is characteristic of the region. There, we share the everyday lives of Chantal and François, regulars for over thirty years, and José, the camp's Jack-of-all-Trades, and also its living memory. Meeting them, our prejudices soon disappear...

THE BOAT LIFT

A fond de cale

A few weeks before a summer season of gliding across the clear waters of the Mediterranean, large luxury yachts get their beauty treatment in the shipyards of southern France. For several years, a shipyard in La Ciotat has been using a fast and revolutionary method to bring these billionaires' babies out of the water. They have invested in a boat lift, a machine that can lift an 80 metre yacht and set it down on dry land. Using a dozen cameras placed on the docks, on board and under the water, we filmed the delicate process of drydocking. On board the Annamia the crew are on alert because the slightest gust could divert the ship from its trajectory. Underwater, divers prepare the manoeuvre. They are responsible for positioning the boat on the large underwater platform. The success of this precise operation depends on their skill and accuracy. Today the task is more complicated than usual because the mistral is blowing and there is a strong swell. All players are aware that the monster emerging from the water represents tens of millions of euros.

12'
BASQUE COUNTRY

THE LAST LINE OF FISHERMEN

Les derniers canneurs

On the Atlantic coast, the hunt for schools of bluefin tuna takes place during the summer months off the coast of the Basque Country. Taking advantage of fish migration and subject to draconian quotas, the crews set off in pursuit. Once on the banks the men fish without nets, using a simple rod and line and the strength of their arms, hauling in individual tuna that can weigh up to 30 kilos. The sale of bluefin accounts for more than 50% of their turnover for the year, a very lucrative business that provides a livelihood for ten families on the Basque coast. But with the meager quotas imposed on them by the Commission for the Conservation of Atlantic Tunas, the anglers know that each season may be their last.

ROMMEL'S TREASURE

Le trésor de Rommel

This is the story of a ghostly hoard that treasure hunters from all over the world are still searching for. In 1943, several chests filled with gold, jewels and pearls were said to have been sunk off the coast of Bastia. This treasure was said to have come from pillaging by the troops of Erwin Rommel who were fighting in Africa during World War II. There are few witnesses in this story, but much fantasy surrounds a real legend created by a single, mysterious figure: one Peter Fleig. This former diver swears that it was he who hid Rommel's loot.

12'
USA**SOUTHBEND, CAPITAL OF OYSTER****Southbend, la capitale de l'huitre**

The center of the world for the most widely eaten bi-valve on the planet is not in Japan or Arcachon. No indeed. It's South Bend, the self-proclaimed oyster capital of the world. On the West Coast of the United States, not far from the Pacific Ocean, the city of South Bend is located on the shores of the Willapa River, which flows into Willapa Bay. 500 times as big as the Gulf of Morbihan or the Basic of Arcachon, 670 times as big as the Etang de Thau, South Bend supplies no less than 1/6th of all oysters produced in the United States, about 4 million tonnes per year, a bonanza worth 70 million dollars. The Herrold family has lived there for generations. Today, the two brothers, Roy and John, run the oyster farm.

12'
FRANCE**THE SKELETONS OF QUEMENES****Les squelettes de Quemenes**

On March 10 2008 a ferocious storm is unleashed upon Brittany. Off the coast of Finistere, in the Molene archipelago, the tiny island of Quemenes is battered by giant waves. It was on this tiny island that a young couple had arrived to give new life to an abandoned farm by turning it into holiday accommodation. That day, when David is taking a solitary stroll along the beach, he discovers four skeletons in a state of perfect preservation. From that moment an enthralling investigation is launched... into a realm somewhere between fantasy, myth and reality.

REUNION ISALND**HUNTING THE GOUZOU****La chasse au Gouzou**

On Reunion the new Sunday sport is hunting the gouzou. Whole families set out on the trail of this tiny beast that hangs around everywhere: on walls, on billboards, on cliffs, sometimes even perching more than a 100 feet up on the ruins of a house. He's a mischievous little character with no arms and no face who expresses his joy and anger, leaving messages as he goes and pointing his finger at facets of society in a constantly humorous way. Now a full 20 years old, the gouzou has become a part of Reunion's heritage. But who lies behind this character? Jace, gouzou's creator, is a secretive man who prefers to remain in the shadows. Nevertheless, he did agree to open the doors to his lair up on the heights of Saint Pierre for us and we follow him discretely on the trail of his mischief-making. We also learn that, boosted by his success, gouzou is spreading far beyond the frontiers of Reunion.

11'
FRANCE**CANNES, THE FESTIVAL SEEN FROM THE SEA****Cannes, le Festival vu de la mer**

Every year the month of May sees the world of cinema descend on the Croisette and the Bay of Cannes: it's the Festival. But just for a change we're ignoring the red carpet and the starlets to take a look at the other festival taking place along the shore. On the water during these rather special two weeks the folks of Cannes have to cohabit with people who are there to party and to be noticed, whatever the cost.

11'
FRANCE**THE SAILS OF ST. TROPEZ****Les voiles de St. Tropez**

At the end of every summer, the famous village with the coloured bell tower holds a race that is unique in the world. The "Sails" is the largest gathering of sailing boats in the world. Three hundred boats sail the Bay of St Tropez to win the most prized trophy of the season, the final regatta before winter, the Holy Grail for classic yachting crews. This year we invite you to experience the race as you've never lived it before, aboard two emblematic yachts of the 30s, both from the drawing board of the famous Scottish designer, William Fife: Tuiga of the Monaco Yacht Club and Mariska with its Swiss crew. These two monuments of sail are the ultimate sporting boats and their identical dimensions make them close competitors. Aboard are the finest sailors of the day, constantly working their cathedrals of sail with one single objective: to cross the finishing line first.

11'
FRANCE**A THORNY DISH****Une épineuse disparition**

Every Sunday, from the month of February, along the Côte Bleue, it's the oursinade hour. A plate of sea urchins, a glass of white wine, a ray of sunshine, a few friends... the feast of the sea urchin now attracts up to 10,000 people on a Sunday. What was originally a minor traditional festival has turned into an institution. But there's one small problem: the "caviar of the sea", as it is called, a victim of its own success, intensive fishing and perhaps also of the consequences of global warming, is disappearing from the Mediterranean seabed. Today there are barely a dozen professional fishermen in the Mediterranean, subject to very strict regulations and inspections in order to limit the disappearance of the species. Among this handful of professionals, Franck Ravez, with the aid of scientists, is carrying out an experiment aimed at creating a breeding farm in the region.

THE INDIES COMPANY

La Compagnie des Indes

"The French Indies Company" was founded in 1664. This was the great period of adventurers, pirates, and shipwrecks that still retains a part of its mystery today and feeds some incredible tales. It also marked the birth of a city: Lorient, built upon naval dockyards and trade with the New World. However, behind the romance of these epic adventures, there was an extraordinary commercial enterprise that has no equivalent today. The French Indies Company, founded on the model of a multinational, had the power to appoint ambassadors, to declare war or sign treaties. It had its own bank and its own currency, managed overseas companies and thus contributed to the spread of France abroad alongside her two great rivals: England and Holland. Today, all that remains of this fabulous adventure is our taste for coffee, spices, fabrics, porcelain, but above all the seeds of a globalisation that was to profoundly change the economic structures of our societies.

YELLE

Yelle

Saint-Brieuc has its star. She is young, fresh, smart and friendly. She electrifies theatres and dance floors on all continents. She's better known around the world than she is in France. Her name? Julie Budet, aka Yelle... Hip globetrotter, but with roots deep in Saint-Brieuc. A girl almost like any other. And it runs in the family: her father wrote and composed one of the most famous of Breton sea shanties. An anthem that is played everywhere and every when.

PACIFIC OCEAN

TRASHVORTEX

Du plastique plein le Pacifique

An island in the Pacific Ocean twice the size of France, which belongs to no-one. It sounds like a dream come true. However this 'island', floating in the sea half way between Hawaii and San Francisco, is in fact a giant rubbish heap, made up of 80% of plastics.

THE HERMIONE: THE GREAT VOYAGE

Hermione : La grande traversée

It is the story of a ship: the replica of the frigate that carried Marquis de La Fayette to the United States in 1781 on his mission to help the American insurgents. Two hundred and thirty-five years later, the Hermione, once again sails to America. And her voyage marks the beginning of another adventure. 160 people were chosen to make up the crew and were trained to sail this ship whose construction in Rochefort took over 20 years.

On the crew, only 15 are professional sailors. The others, for the most part, have never set foot on an old tall ship. They take their places on deck as top men and top women. They must learn by heart the 250 maneuvers on deck, and prepare themselves to struggle with the 24000 square feet of sails which makes the Hermione one of the most demanding ships in the world to navigate.

Their mission is a dangerous one. This is the first time the Hermione has set sail on such a long journey. No one knows the limits of the tall ship or knows if the skills of today's crew will be equal to the sailors of the 18th century.

IN FLANDERS, AROUND DUNKIRK

En Flandre, autour de Dunkerque

From the pretty town of Bergues featured in the film, "Bienvenue chez les Ch'tis to Oostduinkerke, the Belgian seaside resort on the other side of the border by way of Dixmude, Zuidcoote and Malo Les Bains, this is a flight over Flanders, seaside and landside. A trip of around one hundred kilometres to discover the details, life-size, of the panorama surrounding Dunkirk. A big breath of Flemish air with just one little incursion along the Opal Coast around the sites of two Capes (Blanc-Nez and Gris-Nez) recently nominated Major Sites of France.

TRUCKS TO GO

Truck en stock

For decades the truck was the only means of transport for Tahitians. It's a homemade construction: an engine, a cab from a lorry and a wooden container. The truck provides the link between the town and the little villages around the islands.

We are in Raiatea, the capital of the Tuamotus, and they still use trucks here. Manua started one of the biggest trucking services on the island. However, today his big worry is the technical inspection of his oldest truck. His son, Pierre, is taking care of it. The old truck, with 719,000 km on the clock, has always come through this delicate trial and starts without a hitch. This truck has a very special place in the family and, like an old friend, they have a nickname for it: "Bombo", the warrior of Pomotu. However, the last trucks are receiving a death sentence under new laws. Manua will probably park his last trucks in the shed that stands next to his house... a shed that seems to serve as a cemetery for his old trucks, which he can't bring himself to destroy.

20 000 LEAGUES OVER THE SEA

20 000 lieues sur les mers

On January 24 2012 the André Malraux is launched in the presence of the Minister of Culture. This new ship for the Department of Subaquatic and Submarine Research (Drassm) will enable France to maintain its lead in the world of undersea exploration. Created in 1966 by André Malraux, then Minister of Culture, the Drassm is responsible for a maritime territory with a surface area of 11 million m² along the coasts of France. Since its creation the Drassm has explored 1,500 sites in France and abroad. After 5 years of thought and study, the André Malraux is about to turn a new page in the history of underwater archaeology. With this new ship, which benefits from the latest technology, the Drassm teams now foresee exploring the deeps where hitherto inaccessible wrecks are lying. The André Malraux's first mission will be to excavate the wreck of La Lune, a vessel that sank off Toulon in the 17th century. According to estimates, 200,000 wrecks lie in French waters... which leads scientists to describe the sea as the greatest museum in the world.

ALL MY LIFE, I HAVE HAD A DREAM...

Toute ma vie, j'en ai rêvé

In an India that has changed at breakneck speed, new-found wealth has deepened the rift between the richest and poorest segments of society, and created desires that people never imagined before. Only 3% of the population can afford a plane ticket. B.C. Gupta has installed an old Airbus whose flying days are over in the poor district of Dwarka in New Delhi. Thus the very poor can enjoy a simulated flight for only a few rupees. For an hour they can be a passenger like any other. With one slight difference: the plane can't take off.

THE PELADAO, FOOTBALL AND BEAUTY

Le Peladao, du foot et des filles

"Goooooooooooooal!" On the beach, in the street, at the back of an empty lot ... Throughout Brazil, everyone plays "futebol"... In Manaus it's the same, everywhere and with no reason to play, because for Brazilians football is the reason to live. But in the heart of the forest, there is an event where football has to share the limelight. In Manaus a competition takes place every year which brings together the beautiful game and the beautiful forms of the loveliest girls in the Amazon. It is called the Peladao. We spend a week-end with Erika and her team on their way to the semi-finals.

CURRENT ACCOUNTS FOR THE RIVER BANKS

Des billets de banque au fil de l'eau

From Manaus to the border with Colombia, the Amazon enables boats to supply the Indian villages of the river banks. The boat owners are often whites who transport goods and passengers following their centuries-old commercial tradition. But one of them has decided to innovate. In recent months he has had a bank on board. The "Explorer IV" is a boat like any other, but with a cargo of banknotes. The boats load, unload, wait, cast off. Before, the traders would exchange a few products from town for the Indians' gold and spices. Today, you can open an account. The boat is revolutionizing the habits of the Indians who miss the days when their land was still a paradise, before they discovered the existence of money.

HOLIDAY ON MOOREA

Vacances a Moorea

Rubel and his men have just a few hours to prepare a huge family banquet. More than 300 guests have made the journey to Moorea for his nephew's wedding. The deadline is tight, because the Church ceremony is about to begin. We invite you to share a marathon day around an Ahi ma'a, the ancestral oven of the Tahitians. An oven dug in the sand where everything depends on mastery of the fire and the heat.

LAOS

THE KHOC SAAT SALT MINE

La Mine de Sel de Khoc Saat

In Khoc Saat, the alchemy that accompanies the dawn evokes the ancient magic of the dawning of the world. It is eight o'clock when the small village rises to the call of the sky. It is about to repeat its lifelong rhythm, a race against time to extract salt from the bowels of the earth. Seventy families live and work there, right in the middle of nowhere. Water is pumped from 250 meters down in an ancient sea, rich in salt. It is left to stand in shallow ponds. After three days, the water has evaporated. The white gold - salt - appears. This cycle has been renewed since the dawn of time, by the sweat of the brows of succeeding generations. The men and women going about their business in the salt fields, in the shadow of warehouses or factories, bear witness to lives spent in the dampness of potash, eyes fixed on the horizon of days to come.
